## Foreword

The 2014 Myanmar Population and Housing Census (2014 MPHC) was conducted from 29<sup>th</sup> March to 10<sup>th</sup> April 2014 on a *de facto* basis. The successful planning and implementation of the census activities, followed by the timely release of the provisional results in August 2014 and now the main results in May 2015, is a clear testimony of the Government's resolve to publish all information collected from respondents in accordance with the Population and Housing Census Law No. 19 of 2013. It is my hope that the main census results will be interpreted correctly and will effectively inform the planning and decision-making processes in our quest for national development.

The census structures put in place, including the Central Census Commission, Census Committees and Offices at all administrative levels and the International Technical Advisory Board (ITAB), a group of 15 experts from different countries and institutions involved in censuses and statistics internationally, provided the requisite administrative and technical inputs for the implementation of the census. The technical support from UNFPA and our strong desire to follow international standards affirmed our commitment to strict adherence to the United Nations guidelines and recommendations, which form part of international best practices for census taking.

This Main Census Report - Union (Census Report Volume 2) - is the second in a series of publications to be released from the 2014 MPHC. It contains detailed information on demographic and socio-economic characteristics of the population and households at the Union and State/Region level. The initial analysis indicates that the 2014 MPHC data are complete and accurate. However, census enumeration did not cover some population groups in the northern parts of Rakhine State and in a few areas in Kachin State. In parts of Hpa Pun Township in Kayin State, only the total number of households and population by sex were submitted to the Census Office. The Government, with support from UNFPA, minimised the impact of these situations as much as possible and estimated the population missed in these areas. The estimates and the methodology used for estimation of the population not counted in these areas are provided in section 1.3 of this report.

As the Census is a massive statistical operation and an important national exercise, the Government ensured that its implementation incorporated the participation of all stakeholders, either directly or indirectly, through various census committees, continuous consultations and sensitisation workshops, as well as through the dissemination of information through print and electronic media. An effective communication campaign was mounted to create public awareness and mobilise national support for the Census.

On behalf of the Government, I express our gratitude to UNFPA and our development partners, namely Australia, Finland, Germany, Italy, Norway, Sweden, Switzerland, the United Kingdom and the United States of America for their generous contributions. Their financial, technical and logistical support was critical to the success of our census. They provided useful advice and contributed immensely to various activities, including technical assistance, equipment and materials, printing of questionnaires, training of trainers and enumerators/supervisors, publicity materials, scanning of questionnaires, analysis of data and printing of the census publications, amongst other activities.

We are greatly indebted to the President of the Republic of the Union of Myanmar, H.E. U Thein Sein, and the Patron of the Central Census Commission, the Vice President of the Republic of the Union of Myanmar, H.E. Dr. Sai Mauk Kham, for their valuable guidance in the census process. Also to be acknowledged are the members of the Central Census Commission and Census Committees at every administrative level

for working tirelessly to support the census process. Our gratitude also goes to the technical teams at the Ministry of Immigration and Population and UNFPA who worked around the clock to ensure that the census was implemented according to the planned timeline, and that all the reports and guidelines were produced and delivered on time. Special appreciation goes to the enumerators, supervisors and trainers, who were mainly from the Ministry of Education, as well as those from self-administered regions and from other institutions.

Finally, I would like to thank all Myanmar people for their support to the census process in general, and cooperation during the enumeration in particular. I would like to reiterate our promise that the completed census questionnaires are strictly confidential and are being handled with the utmost care, and that they will be used for the purposes of statistical compilation only.

H.E. U Khin Yi,

Minister for Immigration and Population

**Republic of the Union of Myanmar**

## List of Statistical Tables

Table Number	Description
	<b>Series A: Demographic Characteristics</b>
A-1	Population by household type, sex and sex ratio by urban and rural, (Union, State/Region)
A-2:	Population, households and sex of head of household, percent of female headed households by urban and rural, (Union, State/Region)
A-3:	Population by urban/rural and sex; sex ratio and percent of population urban, (Union, State/Region, District and Township)
A-4:	Conventional households by sex of the head, percent of female headed households, population by type of household and mean household size, (Union, State/Region, District and Township)
A-5:	Population by urban/rural, sex by single years of age, (Union)
A-6a:	Population by urban/rural, sex and 5-year age groups, (Union)
A6.b – A6.p:	Population by urban/rural, sex and 5-year age groups, (State/Region)
A7:	Population by selected age-groups and dependency ratios by urban and rural, (Union and State/Region)
A-8:	Population by sex, conventional households and population in conventional households and mean household size by capitals of State/Region
A-9:	Conventional households by size of the household, (Union, State/Region)
	<b>Series B: Social Characteristics</b>
B-1:	Population conventional households by relationship to the head of household and sex, (Union and State/Region)
B-2:	Population in conventional households and institutions aged 10 years and over by marital status, 5 year age group and sex, (Union and State/Region)
B-3:	Population aged 15 years and over by marital status, State/Region and sex, (Union and State/Region)
	<b>Series C: Migration</b>
C-1:	Population in conventional households by place of birth, place of usual residence and sex; (Union and State/Region)
C-2:	Population in conventional households by place of previous usual residence, place of current residence and sex; (Union and State/Region)
C-3:	Migrant population in conventional households by reason of movement from previous residence and sex; (Union and State/Region)

<b>Table Number</b>	<b>Description</b>
C-4:	Former conventional household members living abroad by country of residence, by sex and age; (Union)
C-5:	Former conventional household members living abroad by country of residence, State/Region of reporting household and sex, (Union)
C-6:	Former conventional household members living abroad by country of residence, sex by duration of residence abroad; (Union)
	<b>Series D: Educational Characteristics</b>
D-1:	Population in conventional households 5 years and over, by sex, literacy and age group; (Union, State/Region)
D-2:	Population in conventional households 15 years and over, by sex, literacy and urban/rural; (Union, State/Region)
D-3:	Population in conventional households 5 years and over by sex, school/college attendance and age; (Union, State/Region)
D-4:	Population in conventional households 5 - 29 years, by sex, school/college attendance and urban/rural, (Union)
D-5a, b, c:	Population 5 years and over (including institutions) by highest level of education completed, sex and special age group - urban and rural; (Union, State/Region)
D-6a:	Population 25 years and over by highest level of education completed and sex (both households and institutions); (Union, State/Region)
D-6b:	Population 25 years and over in conventional households by highest level of education completed and sex; (Union, State/Region)
D-6c:	Population 25 years and over in institutions by highest level of education completed and sex; (Union, State/Region)
	<b>Series E: Economic Characteristics</b>
E-1a:	Population 10 years and over by usual activity status, Labour Force Participation Rate, Unemployment Rate, Employment to Population ratio by sex and age group, (Union, Urban/Rural)
E-1b:	Population 10 years and over by usual activity status, Labour Force Participation Rate, Unemployment Rate, Employment to Population ratio by sex and age group, Union – Urban
E-1c:	Population 10 years and over by usual activity status, Labour Force Participation Rate, Unemployment Rate, Employment to Population ratio by sex and age group, Union – Rural
E-2:	Population 10 years and over by usual activity status and sex, (Union, State/Region)
	<b>Series F: Births and Childhood Deaths</b>
F-1:	Women in conventional households aged 15 - 54 years by children ever born to ever married women and children dead by age of mother; (Union, urban/rural, State/Region)
F-2:	Women in conventional households aged 15 - 49 by number of live births in the last 12 months for ever-married women and number of those newly borns who have died, by age of mother, (Union, urban/rural, State/Region)

Table Number	Description
	<b>Series G: Identity Cards</b>
G-1:	Population 10 years and over by type of identity card and age group, (Union)
G-2:	Population 10 years and over by type of identity card and by sex, (Union and State/Region)
G-3:	Population 10 years and over by type of identity card and by urban/rural; (Union and State/Region)
	<b>Series H: Disability</b>
H-1:	Population (conventional households and institutions) by disability prevalence rate, type of disability, by sex and age group; (Union)
H-2:	Population in institutions by disability prevalence rate, type of disability, sex and age group; (Union and State/Region)
H-3:	Population (conventional households and institutions) by disability prevalence rate, type of disability and sex; (Union and State/Region)
	<b>Series I: Housing conditions</b>
I-1:	Conventional households by type of housing unit and urban/rural; (Union and State/Region)
I-2:	Conventional households by type of ownership of housing unit and urban/rural; (Union and State/Region)
I-3:	Conventional households by type of toilet and urban/rural; (Union and State/Region)
I-4 a:	Conventional households by main construction material for the roof and urban/rural; (Union and State/Region)
I-4 b:	Conventional households by main construction material for the external walls and urban/rural; (Union and State/Region)
I-4 c:	Conventional households by main construction material for the floor and urban/rural; (Union and State/Region)
	<b>Series J: Household Amenities</b>
J-1:	Conventional households by main source of lighting and urban/rural; (Union and State/Region)
J-2:	Conventional households by main source of water for drinking and urban/rural; (Union and State/Region)
J-3:	Conventional households by main source of water for non-drinking use and urban/rural; (Union and State/Region)
J-4:	Conventional households by main type of cooking fuel and urban/rural; (Union and State/Region)
J-5:	Conventional households by availability of communication and related amenities, and by urban/rural; (Union and State/Region)
J-6:	Conventional households by availability of transportation items, and by urban/rural; (Union and State/Region)

## Acronyms and Abbreviations

ASEAN	Association of Southeast Asian Nations
CBR	Crude Birth Rate
CDR	Crude Death Rate

# 1. Introduction

## 1.1. Preamble

In April 2014, the Government of the Republic of the Union of Myanmar conducted its latest census, after three decades without a Population and Housing Census. Population censuses were regularly conducted in Myanmar during the colonial era. In the post-independence period, comprehensive population and housing censuses were successfully undertaken in 1973, 1983 and most recently in April 2014. Despite the absence of censuses, several household based surveys such as Fertility and Reproductive Health Surveys, Family and Youth Surveys, Population Change and Fertility Surveys, among others, were regularly carried out to guide programming and policy development in the country.

Censuses are an important source of benchmark information on the characteristics of the population and households in every country. One unique feature of a census is its ability to provide information down to the lowest administrative level. Such information is vital for planning and evidence based decision-making at every level. Additional data uses include allocation of national resources; the review of administrative boundaries; the positioning of social infrastructures such as schools, health facilities and roads; and research. In addition, a census provides a rich source of data for monitoring national and international development initiatives, including national development plans, the Millennium Development Goals (MDG), and the International Conference on Population and Development (ICPD). The need for up-to-date and reliable data provided the impetus for Myanmar to conduct the 2014 Population and Housing Census (2014 MPHC).

The 2014 MPHC results are being released in three phases comprising several publications. Phase one was the publishing and launch of the provisional results (Census Volume 1) in August 2014. Phase two is the publishing and launch of the main results in May 2015, comprising two series of publications: Census Volume 2, which contains detailed information at the Union and State/Region levels, and Census Volume 3, which includes a report for each of the 15 States and Regions in Myanmar. The publication of main census results that require manual coding and further consultations is planned for early 2016. Phase three of the publications will be the thematic analysis reports on the numerous themes covered in the census. The estimates of maternal mortality ratio from the census will be published as part of the thematic reports. During this phase, in depth evaluation, analysis and interpretation of data will be carried out.

### **This report is Census Volume 2 which contains the main results at the Union and State/Region levels**

It is divided into four parts. Part one contains the background to the 2014 MPHC, quality assurances adopted to ensure better coverage and high data quality, and procedures used to estimate the population in non-enumerated areas. Part two presents the key findings of the results with interpretations and illustrations. Part three is the detailed tables which include comprehensive information from the census at the Union and State/Region level. Part four are attachments, the census questionnaire, and lastly a glossary of terms and concepts used both in the publication and census process. The detailed tables contained in Part three cover the following topics: population size and characteristics; population size of capitals of States and Regions; social characteristics; migration; former members of households living outside of Myanmar; disability; births and childhood deaths; types of identity cards; education and literacy; economic characteristics; housing conditions; and availability of household amenities.

The definitions of terms and concepts used in this publication and in the census process are contained in the Glossary of Annex 2.

## **1.2. The 2014 Population and Housing Census**

### **1.2.1. Management and Planning**

The Department of Population (DoP) in the Ministry of Immigration and Population (MOIP) is responsible for the management, planning and implementation of the 2014 MPH. The Population and Housing Census Law No. 19 of 2013 mandated DoP to collect information during censuses from every person, household and/or establishment. Through the Law, census committees and offices were created to facilitate the successful implementation of the planned census activities at every administrative level in the country.

Planning for the Census started in 2011 with assessments of the main components of the entire census taking process. Assessments were undertaken in mapping, data processing, risks associated with census-taking, resource requirements, questionnaire development, communication publicity and advocacy, and lastly, analysis, publication and dissemination of results. These assessments were used to compile the Census Project Document, which guided the implementation of the entire census.

### **1.2.2. Enumeration Area Mapping**

The process of preparing census enumeration area (EA) maps<sup>3</sup> began in June 2012. Township Immigration Officers who prepared the maps were trained on the objectives of the census, the roles of maps in the census process, concepts of sketching maps at Township and ward/village tract levels, and plotting new landmark features on the maps. After merging all topographical sheets that make up the entire country, maps of each of the 330 Townships were printed and distributed to the respective Township Immigration field offices. The Township Immigration Officers then collected information on the total number of households and the population of institutions in each ward and village tract. The collected information was used to delineate census enumeration areas where each enumerator was to be assigned. Maps were drawn for over 16,000 village tracts and wards. In total, 81,750 enumeration areas were created, covering almost the entire country. In a few areas in Shan State, Kachin State and Kayin State, it was not possible to prepare maps using this methodology; instead maps were prepared using satellite imagery.

### **1.2.3. Development of Questionnaires and Manuals**

The development of census questionnaires and field instruction manuals started in July 2012. The process took into account data needs in the country based on consultations with data users, the Principles and Recommendations of the 2010 Round of Population and Housing Censuses, and past experiences of censuses in Myanmar and ASEAN<sup>4</sup>.

A household questionnaire was designed to ascertain the number of persons in conventional households on 29<sup>th</sup> March 2014 (Census Night) and to collect demographic, social and economic data. Questions on housing conditions and amenities were also included in the questionnaire. Questions on former household members living outside Myanmar and household members who had died during the 12 months before Census Night were also included. In total, the questionnaire contained 41 questions (Annex 1).

<sup>3</sup> An enumeration area map was drawn down to the ward level in urban areas and to the village tract level in rural areas to guide census enumeration. An EA map showed clear boundaries of the area to be covered by one enumerator. It had the positions of all structures and households.

<sup>4</sup> At the time of preparing this report, ASEAN member countries included Brunei Darussalam, Cambodia, Indonesia, Lao PDR, Malaysia, Myanmar, the Philippines, Singapore, Thailand and Vietnam.

An institution questionnaire containing 11 questions, which were selected from the household questionnaire, was used to collect data on persons in institutions such as hospitals, hotels, prisons, monasteries and boarding schools, as well as the floating population, which included out-door sleepers and those who were at the sea-ports on the Census Night.

#### **1.2.4. Recruitment and Training**

Almost all field census personnel were teachers, recruited by the Ministry of Education and Township Census Committees. The assignment of enumerators to the areas where they were to collect data was mostly based on the ability to speak the local language and familiarity with local communities.

Training of field personnel was cascaded at four levels. A team of experts in census and survey implementation was drawn from the DoP, UNFPA, the Australia Bureau of Statistics, the Registrar and Census Commissioner's Office in India, DRS Ltd and the Department of Social Welfare. The team reviewed the training materials and developed a comprehensive training programme. The team trained core trainers, primarily from the Ministry of Immigration and Population. The core trainers trained the master trainers from universities and other government departments. The master trainers then conducted similar trainings for a team of carefully selected District trainers. These were senior teachers at the State/Region and District levels. The District trainers then proceeded to train supervisors and enumerators at each Township headquarters.

All cadres of personnel were trained for five days. For supervisors, an additional day was added to take them through their roles, field operations, re-interviews, checking for errors in completed questionnaires, and communication and management skills.

#### **1.2.5. Census Enumeration**

The enumerators and supervisors reported to their respective EAs at least two days before the start of the Census. The days before the start of the enumeration were used to identify EA boundaries, check structures and households within each EA, and update information on EA maps and structure listing forms in instances where this was necessary.

The census enumeration aimed to count all persons who were within the borders of Myanmar on the night of 29<sup>th</sup> March 2014 (Census Night). To achieve this, Township Census Officers, with support from the census committees, made arrangements to ensure that the enumeration of the population in the three key institutions (hotels, hospitals and police/prison cells) was undertaken on census night. The enumeration of the population was satisfactorily completed in almost all States and Regions within the planned 12 days.

Enumeration started in the first week of March, earlier than the rest of the country, in three areas of Puta-O District (Kachin State), Mine Lar Township (Shan State) and Co Co Island (Yangon Region). This was due to a special request from community leaders because of harsh weather conditions, limited access to certain areas and transportation challenges. In Wa Self-Administered Division, the training of personnel was conducted earlier, but data collection took place at the same time as the rest of the country.

There were, however, challenges in conducting the enumeration in some parts of northern Rakhine State and in certain villages in Kachin State, controlled by the Kachin Independence Organisation (KIO). In addition, enumeration did not take place in a few village tracts of Hpa Pun Township in Kayin State.

### **1.2.6. Data Processing**

Data processing is a crucial and integral part of post-enumeration census activities. Specifically, it involves data capture, coding, editing, and analysis. The 2014 MPHC took full advantage of advances in technological developments in the implementation of data processing. There are various different methods available for capturing data of population and housing censuses. From these, DoP opted for the Optical Mark Reader/Intelligent Character Recognition/Key-in from Image (OMR/ICR/KFI) scanning technology after intensive evaluation.

The census questionnaires were specifically designed to be scannable and easy to handle. Enumerators were intensively trained in correctly recording the data onto these questionnaires in order to ensure accuracy, thus enhancing the efficiency of the scanning system. This allowed the questionnaires to be processed more quickly and with fewer staff compared to what would have been required if other options had been used. The scanning system functioned well, and by early October 2014 all the estimated 11.5 million forms had been captured.

### **1.2.7. Independent Observation Mission**

An independent team of international and national observers carried out an observation mission of the enumeration in all States and Regions. The objectives of the observation mission were to: a) document the census process, particularly the way in which data were collected in selected Townships and enumeration areas; b) provide feedback to the government during and after the enumeration; c) objectively assess the exercise against international standards and national legislation; and d) document lessons learned and good practices to improve the government's capacity to conduct future censuses.

The observers visited all 15 States and Regions of Myanmar, 41 districts (55% of the total), 121 Townships (37% of the total) and 901 enumeration areas (1.1% of the total). They observed 2,193 interviews across the country. At the end of the census enumeration, a report was published with the findings from the observation mission. This is available at: <http://countryoffice.unfpa.org/myanmar> and <http://www.dop.gov.mm/>

### **1.2.8. Provisional Results**

The 2014 MPHC provisional results were published and launched on 30 August 2014 by the Minister of Immigration and Population. The report presented the size of the population by sex at Union, State/Region, and in a few cases District and Township levels. The provisional results are available online at: <http://www.dop.gov.mm/> and <http://countryoffice.unfpa.org/myanmar/?publications>

### **1.2.9. Areas where not all People were Enumerated**

In parts of Rakhine State, members of some communities were not counted because they were not allowed to self-identify using a name that is not recognised by the Government. The Government made this decision in the interest of security and to avoid the possibility of violence occurring due to inter-communal tensions.

In Kachin State, the Kachin Independence Organisation (KIO), did not allow enumerators to count people in villages situated in the areas they resided. This was in spite of negotiations between the Government and KIO leaders. An estimated 97 villages were missed in the enumeration in Kachin State.

In Hpa Pun Township of Kayin State, the census could not be conducted in some villages situated close to the headquarters of Brigade Five of the Kayin National Union (KNU). Instead, the leadership of KNU provided the total number of households and population by sex for each of these villages. In all other areas, the enumeration took place as planned.

Estimates for the non-enumerated population in the areas mentioned above were established and are presented in the following section.

### **1.3. Estimation of the Populations Not Counted in Rakhine State, Kachin State and Kayin State**

In an effort to ensure that the entire country was included in the 2014 Census and that the results reflected the total population, a detailed verification was conducted for each census enumeration area at the Census Office. This assessment showed that some areas in northern Rakhine, Kachin and Kayin States were either partially enumerated or not covered during the enumeration. This section explains how the estimation of the population not counted in these three areas was conducted.

#### **1.3.1. Rakhine State**

A review of information on the enumeration in Rakhine State shows that not every household or population in the three districts of Maungdaw, Sittway and Myauk U were covered. Comparison of the enumeration data with the numbers compiled during the census mapping process provided a more coherent picture of all households in the entire State of Rakhine. During the mapping of census enumeration areas, Township Immigration Officers drew sketch maps of each village tract and ward. The maps included every structure observed on the ground during the mapping exercise.

For each structure, the information collected included the number of males and females who lived in each household. The information collected from the mapping/structure listing process was consistent with the enumerated population in areas where complete enumeration took place in Rakhine State and in all areas of the country. The mapping and structure listing data can, therefore, be relied upon to estimate the population that was not counted in Rakhine State. Analysis shows, that about 31 percent of the mapped population of Rakhine State was not counted in the census. At the national level, a comparison between mapping and enumeration data shows that the census enumeration figure was higher by 4 percent when compared to the mapping. This is because of intensive efforts to cover all households and people in each EA by the enumerators and community support groups during the enumeration period. When this national level factor was applied to the mapping data for the affected areas in Rakhine State, it was estimated that a population of 1,090,000 was likely not to have been counted during the enumeration.

#### **1.3.2. Kachin State**

In Kachin State, enumeration could not be completed in 25 village tracts (97 villages) that were located in areas where the Kachin Independence Organisation and their family members resided. The most affected townships were Mansi, Lwegel and Momauk. In these areas, data on the total population collected during the mapping exercise was compared to the enumerated population in parts of the township where enumeration took place. A factor of increase in population numbers between mapping and enumeration was then used to estimate the population not covered during enumeration. Using this method, an estimated population of 46,600 people were not counted in the census in Kachin State.

### 1.3.3. Kayin State

In Kayin State, enumeration was not conducted in some villages in Hpa Pun Township in areas where the headquarters of the Brigade Five of the Kayin National Union (KNU) is located. The information for these villages was provided by the KNU. It was a summary count of households and the population by sex for each village tract and ward. When this information was analysed and compared with data collected during the census in other areas, the information they provided was considered to be reliable. Therefore, data for the areas not covered during the census, but provided by KNU, was considered acceptable. The KNU counted 69,753 persons without using the census questionnaires in Hpa Pun Township in Kayin State.

Analysis of census information reveals that an estimated total of 1,206,353 people were not enumerated in parts of Rakhine State, Kachin State and Kayin State. This represents 2.34 percent of the population. These numbers were added to the overall census population as reported in the provisional results and they have also been included in the main results in this publication. However, the analysis and presentation of the detailed information of the 2014 MPHC is based on data provided by the enumerated population only.

Based on the information obtained from the census, the Ministry of Immigration and Population has developed a Sampling Frame that can be used to obtain representative population and household samples by institutions and individuals that conduct surveys, research and studies. Areas where enumeration did not take place during the census in Rakhine, Kachin and Kayin are included in the Sampling Frame which may enable researchers to include these areas in their household surveys in the future.

## 1.4 Quality Assurances to Improve Data Quality<sup>5</sup>

The planning and implementation of the 2014 MPHC took into consideration a number of strategies and activities to ensure and improve the quality of the overall census process and particularly the quality of data. These steps were to ensure that coverage was as complete as possible and that information given by the respondents, and transcribed by the field personnel, and the data captured at the Census Data Processing Centre was accurate. Some of the main strategies implemented included:

- a) Conducting assessments for each component of the census process and using the outcome of the assessments to accurately implement the respective census phase. This ensured that the best options available were selected and implemented at every stage of census operations. Assessments were carried out in components highlighted in 1.2.1 of this report.
- b) An International Technical Advisory Board (ITAB) was formed made up of a group of 15 experts from different countries and institutions involved in censuses and statistics internationally. They critically reviewed each stage of the census implementation, providing ways of improving the quality of the process where appropriate. This review by such experienced international census experts ensured that correct methodologies and guidelines were adopted at each phase of the census process.
- c) Preparation of census EA maps by demarcating the entire country into small areas down to the lowest administrative units (Village Tracts and Wards). This ensured the widest coverage and avoided cases of omission or double counting during enumeration. The EAs were also useful to determine the exact numbers of personnel and quantities of materials required in each geographic area.
- d) Designing of the census questionnaires through field testing and consultative processes with government ministries/departments, development partners, universities and research institutions and other data users. In addition, United Nations guidelines and questionnaires in similar countries were referred to as much as possible. This ensured that the information collected from the census

<sup>5</sup> United Nations defines dimensions of quality in censuses to include: relevance, completeness, timeliness, coherence, comparability, accessibility and accuracy.

would be relevant to data users and conformed to international standards and guidelines.

- e) Preparation of field instruction manuals and training guides for training trainers (master and district), supervisors and enumerators. These materials standardised the training and data collection procedures throughout the country. The training guides' integrated participatory learning methodologies, including interactive training, and enhanced the inter-personal communication skills of the enumerators with the aim to improve their capacity to communicate with respondents, to improve their confidence and trust in the census process. Experts in training were sourced from the Census Offices in Australia and India, as well as from UNFPA and DRS Ltd. They supported the training of core trainers who went to the States and Regions to deliver similar training to field staff.
- f) Comprehensive pre-testing of the entire census processes and outcomes took place one year before the census; from mapping to data processing to tabulation of the results and to compilation of an evaluation report. The pilot census included testing the census methodology, data collection procedures and instruments, as well as evaluating risks that had been identified around certain aspects of the census. The results of the pilot census were used to improve and tighten up the schedule, timelines, process and management for the actual census. The pilot census also assessed the political risks that had been identified in the political risk analysis. The objective was to ascertain the possible effects such risks could have on the quality of data (in terms of the readiness of respondents to participate and respond to all questions).
- g) Preparing a broad census advocacy campaign, using appropriate channels in order to accurately inform the public about the census and to solicit their support. The campaign included consultations with national leaders, ethnic leaders and religious leaders. The publicity campaign also brought on board national celebrities and used other channels such as the media, civil society organisations, town hall meetings and posters in all parts of the country. To ensure that people in all areas understood census messages, publicity materials were translated into different ethnic languages.
- h) Supervision and support by the Township Census Committee members and Community Support Groups in village tracts and wards to ensure all people were enumerated within their enumeration areas. The ratio of supervisors to enumerators was one to four (1:4).
- i) Before enumeration began, all census EA maps and structure listing forms were updated to ensure that new households, who had moved in to an area after the drawing of EA maps, were captured before the census. The process also ensured that enumerators could plan their work within the census period. Two days were allocated for the updating process before the start of the enumeration, which greatly increased census coverage rates.
- j) Checking and verification of the completeness of coverage in every EA against the updated structure listing forms. This was done once the enumeration had been completed in every enumeration area, and was also completed at the village tract and ward level.
- k) Ensuring that all completed questionnaires and summary forms for every EA were accounted for and returned safely to the Census Data Processing Centre.
- l) Utilisation of the scanning technology for data capture, to minimise data operator errors and shorten the duration of the data capture process. This ensured timely release of the census results.
- m) Preparation and sharing of the data release calendar with all data users. This ensured that data users were aware of what census results would be available at which point in time.

Based on the strategies and controls implemented during the census process, initial analysis of data shows that the 2014 MPHC produced credible quality data, and coverage was good at the Union and State/Region levels except in Rakhine State. The areas where enumeration could not take place constitute less than one percent of the country's land surface and accounted for 2.34 percent of the total population.

## 2. Summary of the Main Results

### 2.1. Population of Myanmar

The 2014 MPHC shows that Myanmar's total population was 51,486,253 persons as of 29<sup>th</sup> March, 2014. Of these, 24,824,586 were males and 26,661,667 were females. This overall number includes an estimated population of 1,206,353 persons who were not enumerated in certain specific areas of the country. The census enumerated a total population of 50,279,900.

The current total population size represents an increase of 46 percent compared with the 1983 census. The distribution of the total population by sex and State/Region is provided in Table 1. The numbers in the table include the estimated population in the non-enumerated areas.

**Table 1: Distribution of Population by Sex and State/Region<sup>6</sup>**

	Total population		
	Both sexes	Male	Female
<b>UNION</b>	<b>51,486,253</b>	<b>24,824,586</b>	<b>26,661,667</b>
UNION (enumerated)	50,279,900	24,228,714	26,051,186
<i>UNION (not enumerated)</i>	<i>1,206,353</i>	<i>595,872</i>	<i>610,481</i>
<b>KACHIN</b>	<b>1,689,441</b>	<b>878,384</b>	<b>811,057</b>
KACHIN (enumerated)	1,642,841	855,353	787,488
<i>KACHIN (not enumerated)</i>	<i>46,600</i>	<i>23,031</i>	<i>23,569</i>
KAYAH	286,627	143,213	143,414
<b>KAYIN</b>	<b>1,574,079</b>	<b>775,268</b>	<b>798,811</b>
KAYIN (enumerated)	1,504,326	739,127	765,199
<i>KAYIN (not enumerated)</i>	<i>69,753</i>	<i>36,141</i>	<i>33,612</i>
CHIN	478,801	229,604	249,197
SAGAING	5,325,347	2,516,949	2,808,398
TANINTHARYI	1,408,401	700,619	707,782
BAGO	4,867,373	2,322,338	2,545,035
MAGWAY	3,917,055	1,813,974	2,103,081
MANDALAY	6,165,723	2,928,367	3,237,356
MON	2,054,393	987,392	1,067,001
<b>RAKHINE</b>	<b>3,188,807</b>	<b>1,526,402</b>	<b>1,662,405</b>
RAKHINE (enumerated)	2,098,807	989,702	1,109,105
<i>RAKHINE (not enumerated)</i>	<i>1,090,000</i>	<i>536,700</i>	<i>553,300</i>
YANGON	7,360,703	3,516,403	3,844,300
SHAN	5,824,432	2,910,710	2,913,722
AYEYAWADY	6,184,829	3,009,808	3,175,021
NAY PYI TAW <sup>7</sup>	1,160,242	565,155	595,087

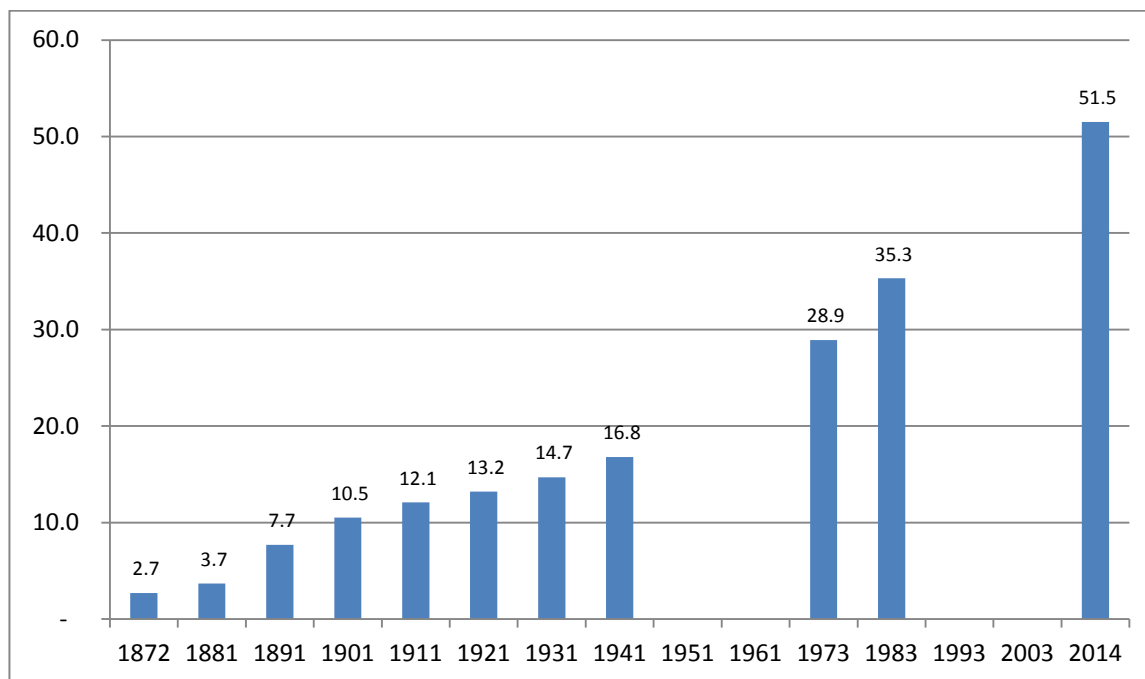

<sup>6</sup> The numbers in blue are estimates of people who were not enumerated in the census. The numbers in bold italics are the sum of the enumerated and the estimated population in the affected States.

<sup>7</sup> The numbers in this table do not include Myanmar people living outside the country at the time of the census, except those people who were working in Myanmar diplomatic missions abroad; this population of 972 people is included in the population figure for Nay Pyi Taw.

The population of Myanmar has been growing since the beginning of census taking by the British in 1872, rising from 2.7 million persons to 10.5 million in 1901, to 13.2 million in 1921, to 28.9 million in 1973, 35.3 million persons in 1983 and 51.5 million persons in 2014. This is illustrated in Figure 2. The rapid increase in population size over this period has policy implications for all sectors of society and the economy, particularly education, health, employment and housing.

**Figure 2: Population Size of Myanmar from Censuses<sup>8</sup>, 1872-2014**

## 2.2. Population Growth Rate

Analyses of the data from the 2014 Census and from past trends in population changes show that the population of Myanmar increased at the rate of 0.89 percent per annum between 2003 and 2014. The decennial growth rate from 1973 reveals a consistent decline from 2.02<sup>9</sup> percent per annum during 1973-1983, to 1.41 percent per annum during 1983-1993, and to 1.38 percent in the 1993-2003 period.

The annual population growth rate for periods when a census was not conducted is derived by projecting the population between 1983 and 2014, using information from the 1983 and 2014 Censuses. This is achieved by making projections using demographic indicators (Total Fertility Rate, life expectancy and migration rates) from household based surveys conducted during this period.

## 2.3. Comparison with selected Asia and Pacific Countries

In comparison with countries in the Asia and Pacific Region, Myanmar’s population size can be categorised as medium. With an annual growth rate of 0.89 percent per annum, Myanmar exhibits one of the lowest population growth rates in the region. Table 2 shows that Thailand, China, Myanmar and Vietnam have population growth rates of less than one percent per annum. The population growth rate of Myanmar compares with Vietnam.

<sup>8</sup> In 1951, 1961, 1993 and 2003 no censuses were conducted.

<sup>9</sup> The annual population growth rate for 1973-1983 is according to the 1983 Burma Population Census Report, June 1986

**Table 2: Population Size, Density and Annual Growth Rate for selected countries in Asia and the Pacific Region**

Country	Year	Population ('000)	Density (per sq. km)	Inter-censal Growth Rate
China	2013	1,385,567	144	0.61
India	2013	1,252,140	381	1.24
Indonesia	2013	249,866	131	1.21
Bangladesh	2013	156,595	1,087	1.19
Philippines	2013	98,394	328	1.71
Vietnam	2013	91,680	276	0.95
Thailand	2013	67,011	131	0.3
Myanmar	2014	51,486	76	0.89
Malaysia	2013	29,717	90	1.61
Australia	2013	23,343	3	1.31
Cambodia	2013	15,135	84	1.75
Laos	2013	6,770	29	1.86
Singapore	2013	5,412	7,923	2.02

#### 2.4. Size and Change of Population by State and Region

Myanmar is divided into 15 States and Regions. Accordingly, the census results show that Yangon Region has the largest population (7.36 million), followed by Ayeyawady (6.18 million), Mandalay (6.16 million), Shan (5.82 million), and Sagaing (5.32 million). These five States and Regions account for almost 60 percent of the total population of the country.

The least populated States and Regions are Kayah (286,000), Chin (478,000) Nay Pyi Taw (1.16 million), Tanintharyi (1.40 million) and Kayin (1.57 million). These States and Regions only account for 9.5 percent of the country's population. The distribution of the population by State and Region is presented in Table 3 for the 1973, 1983 and 2014 Censuses.

**Table 3: Population Size and Proportion to the Total Population by State/Region, 1973, 1983 and 2014**

	Population			Proportion of the Total Population		
	1973**	1983**	2014	1973	1983	2014
<b>UNION</b>	<b>28,921,226</b>	<b>35,307,913</b>	<b>51,486,253</b>	<b>100</b>	<b>100</b>	<b>100</b>
Kachin	737,939	904,794	1,689,441	2.6	2.6	3.3
Kayah	126,574	168,429	286,627	0.4	0.5	0.6
Kayin	858,429	1,055,359	1,574,079	3.0	3.0	3.1
Chin	323,295	368,949	478,801	1.1	1.0	0.9
Sagaing	3,119,054	3,862,172	5,325,347	10.8	10.9	10.3
Tanintharyi	719,441	917,247	1,408,401	2.5	2.6	2.7
Bago	3,179,604	3,799,791	4,867,373	11.0	10.8	9.5
Magway	2,634,757	3,243,166	3,917,055	9.1	9.2	7.6
Mandalay	3,668,493	4,577,762	6,165,723	12.7	13.0	12.0
Mon	1,314,224	1,680,157	2,054,393	4.5	4.8	4.0
Rakhine	1,712,838	2,045,559	3,188,807	5.9	5.8	6.2
Yangon	3,188,783	3,965,916	7,360,703	11.0	11.2	14.3
Shan	3,179,546	3,716,841	5,824,432	11.0	10.5	11.3
Ayeyawady	4,156,673	4,994,061	6,184,829	14.4	14.1	12.0
Nay Pyi Taw			1,160,242	-	-	2.3

\*\* Source: Burma, 1983 Population Census Report: June, 1986

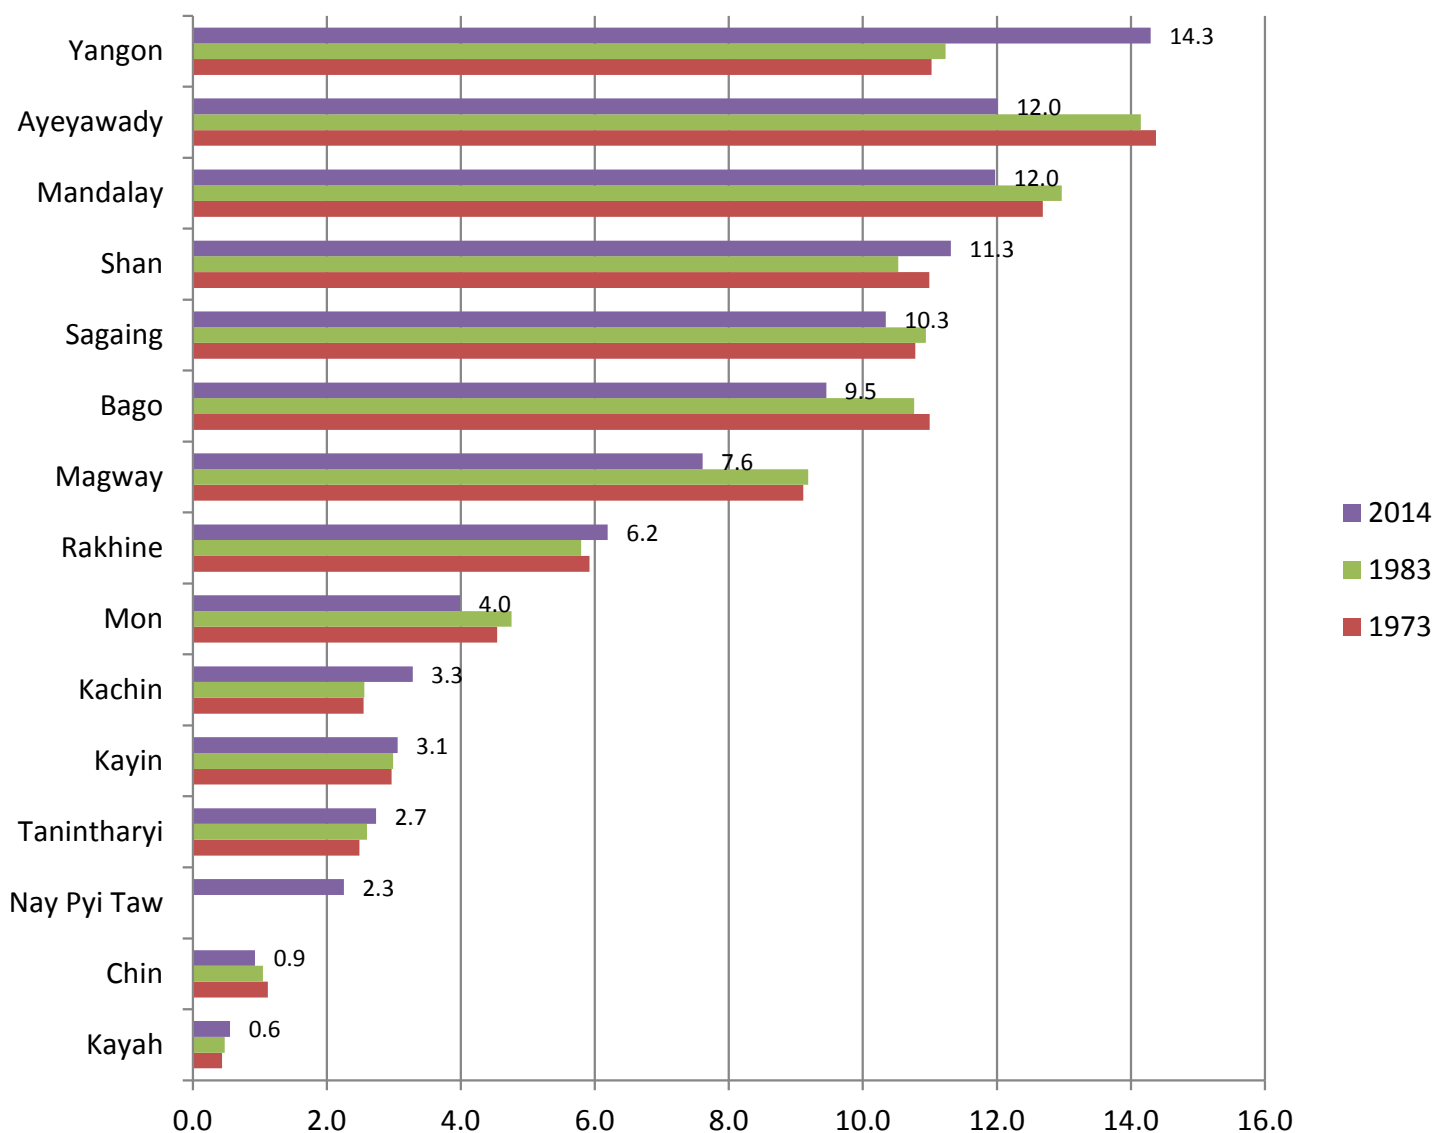

The population size in 1973 and 1983 includes Burmese nationals abroad at 1,576 and 7,710 people, respectively.

Population sizes in 1973, 1983 and 2014 include estimated figures for people not counted in the census.

Comparing the proportion of the population by State and Region, Yangon Region now ranks as number one, surpassing both Ayeyawady and Mandalay Regions, which had a higher population than Yangon Region in the 1983 and 1973 censuses. A substantial increase in population is witnessed in Shan State in the 2014 Census, which could be attributed to the inclusion of Wa and Mine Lar areas which were not enumerated in the previous censuses. Kayah and Chin still remain the States with the least proportion of the population, as shown in Figure 3.

It is worth mentioning that Nay Pyi Taw Union Territory was created in 2006; it was formerly part of Mandalay Region, hence its absence in previous censuses. In the 2014 MPHC, Nay Pyi Taw appears as one of the States and Regions. This explains the decline in the proportion of the total population of Mandalay in 2014 compared to 1983.

**Figure 3: Proportion of the Population of State/Region to the Total Population, 1973, 1983 and 2014**

## 2.5. Population Density

The population density of Myanmar in March 2014 is 76 persons per square kilometre (km<sup>2</sup>). The population density has increased considerably, by 81 percent from 43 persons per km<sup>2</sup> in 1973, and 46 percent from 52 persons per km<sup>2</sup> in 1983. The population density of Myanmar is lower than most other Asian countries but comparable to Cambodia and Malaysia (Table 2). Comparing the population density by State and Region, Yangon has the highest density (716 per km<sup>2</sup>), followed by Mandalay (200 per km<sup>2</sup>), Ayeyawady (177 per km<sup>2</sup>), Mon (167 per km<sup>2</sup>), Nay Pyi Taw (164 per km<sup>2</sup>) and Bago (124 per km<sup>2</sup>). The least densely populated States and Regions are Kayah (24 per km<sup>2</sup>), Kachin (19 per km<sup>2</sup>) and Chin (13 per km<sup>2</sup>). A comparison of the density of the population from 1973 to 2014 is presented in Table 4.

**Table 4: Area and Population Density by State/Region**

	Area** (sq. km)	Population*			Density (people per square km)		
		1973	1983	2014	1973	1983	2014
<b>UNION</b>	<b>676,577.23</b>	<b>28,922,802</b>	<b>35,315,623</b>	<b>51,486,253</b>	<b>43</b>	<b>52</b>	<b>76</b>

Nay Pyi Taw	7,057.10	-	-	1,160,242			164

\* Population missed in parts of the country during enumeration is added for the 1973, 1983 and 2014 censuses.

\*\* Area refers to land surface only, not covered by water.

## 2.6. Population by Urban and Rural Area

The Census results show that for every 100 persons in Myanmar, 70 persons live in rural areas and 30 persons live in urban areas. Yangon Region has by far the highest proportion of people living in areas classified as urban by GAD at 70 percent, followed by Kachin at 36 percent<sup>10</sup> and Mandalay at 35 percent. As shown in Table 5, Ayeyawady has the largest proportion of rural population at 86 percent, followed by Magway (85 percent), and Sagaing and Rakhine (83 percent).

<sup>10</sup> The high proportion of urban population in Kachin may be attributed to large numbers of people working in the mines in this State.

**Table 5: Proportion of Enumerated Population by Urban and Rural areas, Sex, and by State/Region**

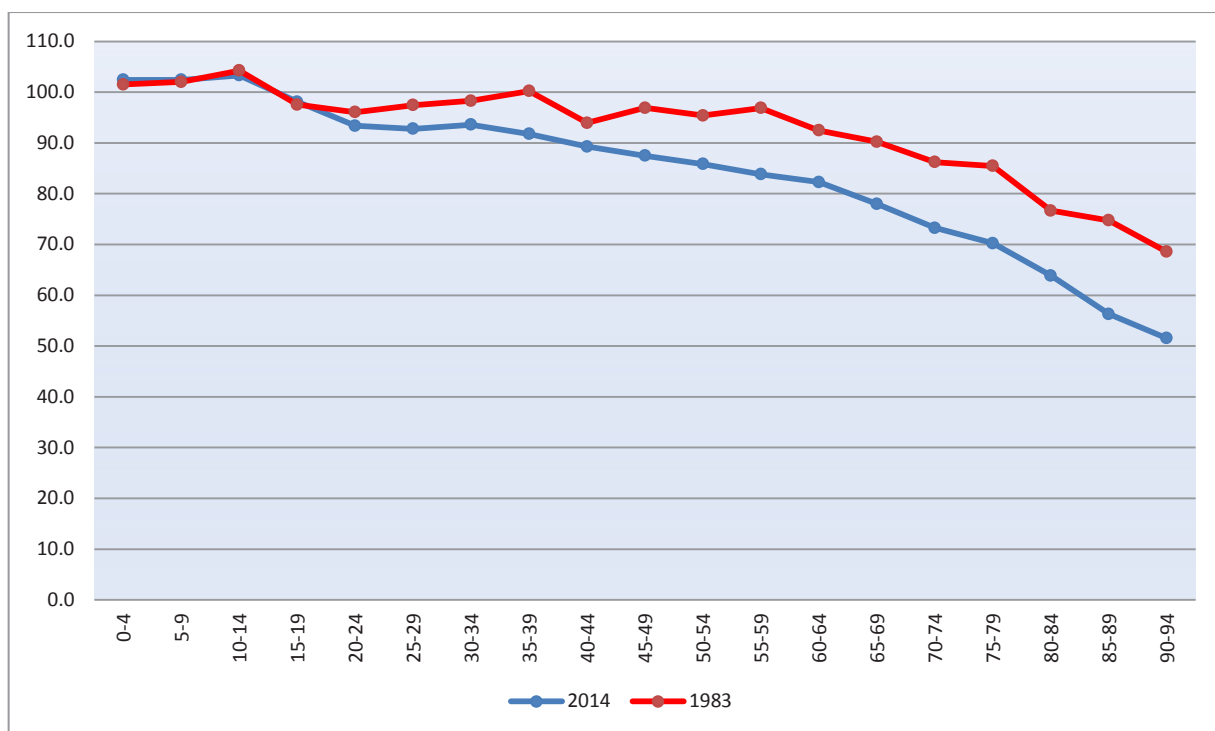

State/Region	Total Population	Urban Population			% urban	Rural Population			% Rural
		Both sexes	Male	Female		Both sexes	Male	Female	
<b>UNION</b>	<b>50,279,900</b>	<b>14,877,943</b>	<b>7,114,224</b>	<b>7,763,719</b>	<b>30</b>	<b>35,401,957</b>	<b>17,114,490</b>	<b>18,287,467</b>	<b>70</b>

## 2.7. Population by Sex

According to the Myanmar Population and Housing Census of 2014, the population is made up of 24,824,586 males and 26,661,667 females. Females out-number males by 1.83 million. The sex ratio of the population (number of males for every 100 females) at the Union level is 93. In 1983 and 1973, the sex ratios were 98.6 and 98.8, respectively. At the State and Region level, the population of males exceeds that of females only in Kachin State (108 males for every 100 females). In Kayah and Shan States, there are equal numbers of both sexes. In the remaining 13 States and Regions, the census counted more females than males. The differences in the sex ratio in Myanmar may be attributed to migration and higher male mortality, starting from adolescence. These factors, however, need to be explored further.

The sex ratio in the population by five-year age groups shows that the sex ratio at birth is 102.4. It is over 100 in all age groups under 15 years. After age 15, the sex ratio declines to below 100 and reduces further with increasing age. This pattern is normal and can be observed in most populations. At birth, boys are born in greater numbers than girls with a sex ratio of 102 to 105. However as males get older, they have a higher mortality rate than females (Figure 4).

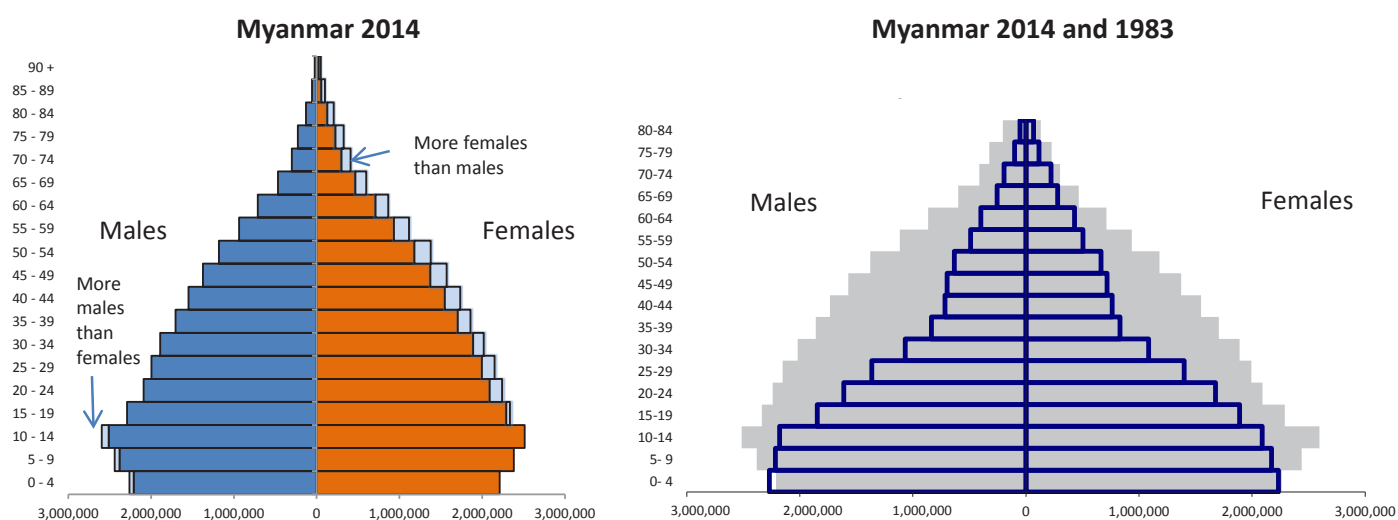

**Figure 4: Sex Ratio by Age, 1983 and 2014**

## 2.8. Population Age-Sex Pyramid

In 2014 a pot-shaped population pyramid can be observed in Myanmar, compared to the broader bottom based pyramid of 1983. The population of Myanmar had more children and young people in 1983. The size of the young generations started to decline approximately 10 years ago as an effect of reduced fertility rates. This is clearly shown in the reduced number of people in the age groups 0-4 and 5-9 on the pyramid for 2014. On the other hand, the size of the young working age population has been steadily increasing. This is evidence of an accelerated demographic transition and provides opportunities for a “demographic dividend” through reduced dependency ratios. The pyramid of the 2014 census superimposed on the 1983 census illustrates the changing age structure and the new demographic dynamics of Myanmar (Figure 5).

**Figure 5: Population Pyramid of Myanmar, 2014 and 1983**

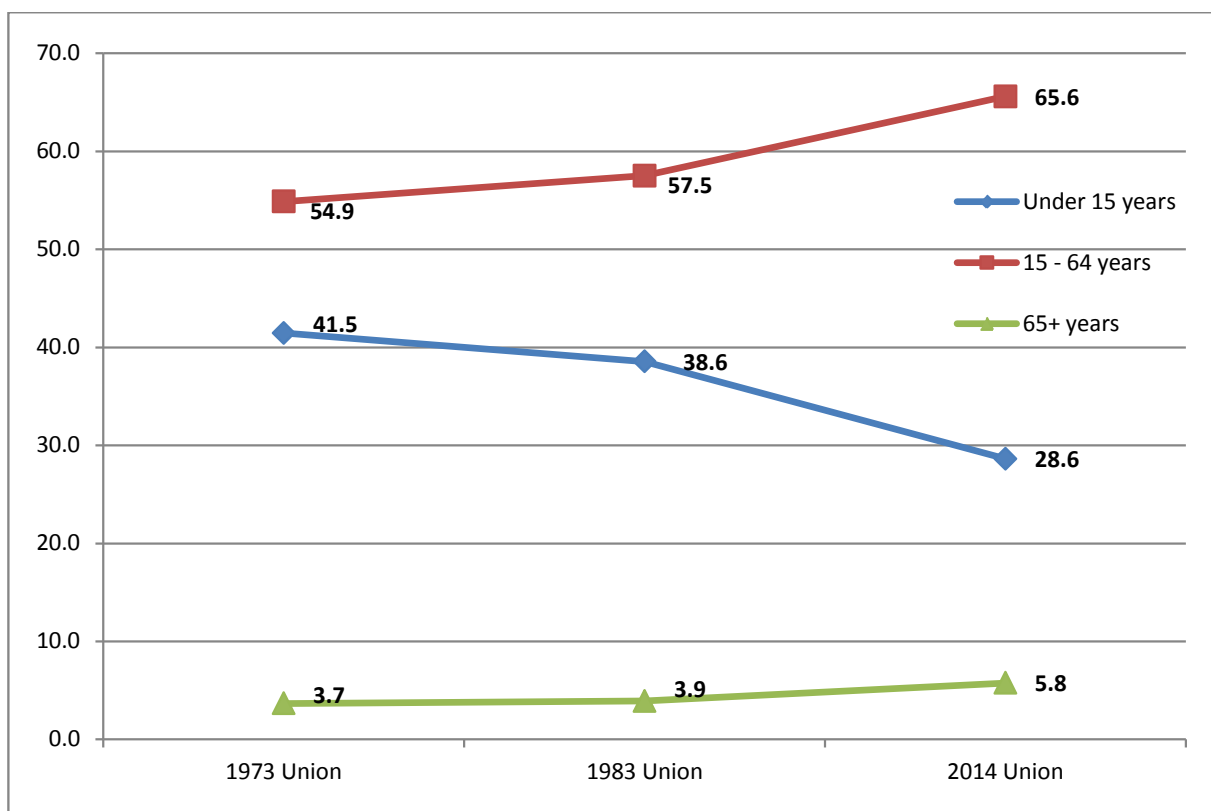

## 2.9. Population by Selected Broad Age Groups

The population can be divided into three broad age groups, those less than 15 years, 15-64 years, and 65 years and over. The distribution of the Myanmar population among these groups in 2014 shows that those under 15 years (child population) is 14,399,569, the population between 15 and 64 years is 32,982,768 (productive age), while the population 65 years and over (aged population) is 2,897,563. These three broad age groups account for 28.6 percent, 65.6 percent and 5.8 percent of the total population, respectively.

Trend analysis shows that the proportion of these broad age groups has significantly changed since 1973, when the child population was 41.5 percent, the productive population was 54.9 percent and the aged population was only 3.7 percent. This trend is depicted in Figure 6.

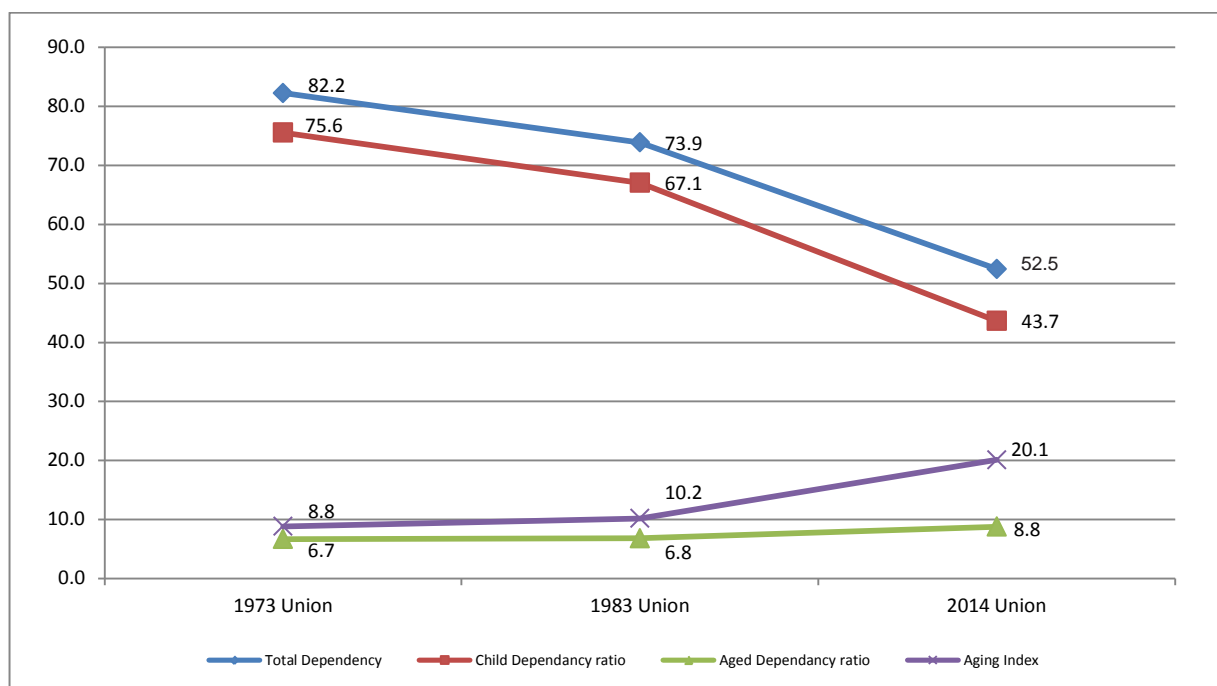

**Figure 6: Population Distribution of Selected Broad Age Groups, 1973, 1983 and 2014**

## 2.10. Dependency Ratios

The structural changes of the population can be illustrated by appropriate indicators such as child dependency ratio (ratio of child population to the productive-age population), old age dependency ratio (ratio of the old age population to the productive-age population) and the total dependency ratio (the sum of the child and old age dependency ratios). The total and child dependency ratios are falling in Myanmar, while the aged dependency ratio and the ageing index are increasing. Figure 7 and Table 6 show how these ratios are changing due to the demographic transformations in the country's population.

**Figure 7: Trends in Dependency Ratios, 1973, 1983 and 2014**

The ageing index (ratio of the aged population to the child population), which provides a particularly sensitive progress indicator of population ageing increased from 8.8 in 1973 to 10.2 in 1983 and to 20.1 in 2014.

**Table 6: Trends in Proportion of Population in Broad Age Groups and Dependency Ratios, 1973, 1983 and 2014**

	1973			1983			2014		
	Union	Urban	Rural	Union	Urban	Rural	Union	Urban	Rural
<b>Broad Age Group</b>									
Total	100	100	100	100	100	100	100	100	100
Under 15 years	41.5	40.7	41.7	38.6	35.7	39.5	28.6	24.1	30.6
15 - 64 years	54.8	55.7	54.6	57.5	60.5	56.5	65.6	69.9	63.8
65+ years	3.7	3.3	3.8	3.9	3.8	4	5.8	6	5.7
<b>Dependency Ratio</b>									
Total Dependency Ratio	82.2	79.1	83.3	73.9	65.3	76.9	52.5	43.0	56.8
Child Dependency Ratio	75.6	73	76.4	67.1	59	69.9	43.7	34.4	47.9
Old Dependency Ratio	6.7	6.1	6.9	6.8	6.3	7	8.8	8.5	8.9
Ageing Index	8.8	8.3	9	10.2	10.8	10	20.1	24.8	18.6

An analysis of dependency ratios at the State and Region level reveals that the proportion of the child population is highest in Chin State (72.3%) and Kayin State (60.6%); correspondingly the same areas exhibit the highest total dependency ratios at 81.0 and 69.3 percent, respectively. This presents a large burden for the productive age population of these areas, considering that the Union average total dependency ratio is 53 percent. In effect, the country is relying on 66 percent of the population to provide for themselves as well as the 34.4 percent of the population who are either children or elderly. The ageing index is 20.1 at Union level. By State and Region, the ageing index is highest in Magway (26.7), Yangon (24.1), Mandalay (23.8), while it is lowest in Kayah (10.8), Chin (12.0) and Shan (13.2). This is shown in Table 7.

**Table 7: Population of Selected Age-Groups, Dependency Ratios  
and Aging Index by State/Region**

	Population of Selected Groups			Dependency Ratio			Ageing Index
	0 - 14	15 - 64	65+	Total Dependency Ratio	Child Dependency Ratio	Old Age Dependency Ratio	
<b>UNION</b>	<b>14,399,569</b>	<b>32,982,768</b>	<b>2,897,563</b>	<b>52.5</b>	<b>43.7</b>	<b>8.8</b>	<b>20.1</b>
Kachin	492,879	1,084,096	65,866	51.6	45.5	6.1	13.4
Kayah	99,003	176,934	10,690	62.0	56.0	6.0	10.8
Kayin	538,596	888,642	77,088	69.3	60.6	8.7	14.3
Chin	191,290	264,605	22,906	81.0	72.3	8.7	12.0
Sagaing	1,525,943	3,468,865	330,539	53.5	44.0	9.5	21.7
Tanintharyi	478,027	858,419	71,955	64.1	55.7	8.4	15.1
Bago	1,383,846	3,175,185	308,342	53.3	43.6	9.7	22.3
Magway	1,056,659	2,578,796	281,600	51.9	41.0	10.9	26.7
Mandalay	1,599,216	4,186,385	380,122	47.3	38.2	9.1	23.8
Mon	641,960	1,278,995	133,438	60.6	50.2	10.4	20.8
Rakhine	653,333	1,305,561	139,913	60.7	50.0	10.7	21.4
Yangon	1,725,413	5,219,941	415,349	41.1	33.1	8.0	24.1
Shan	1,865,293	3,712,196	246,943	56.9	50.2	6.7	13.2
Ayeyawady	1,821,154	4,004,350	359,325	54.5	45.5	9.0	19.7
Nay Pyi Taw	326,957	779,798	53,487	48.8	41.9	6.9	16.4

### 2.11. Marital Status

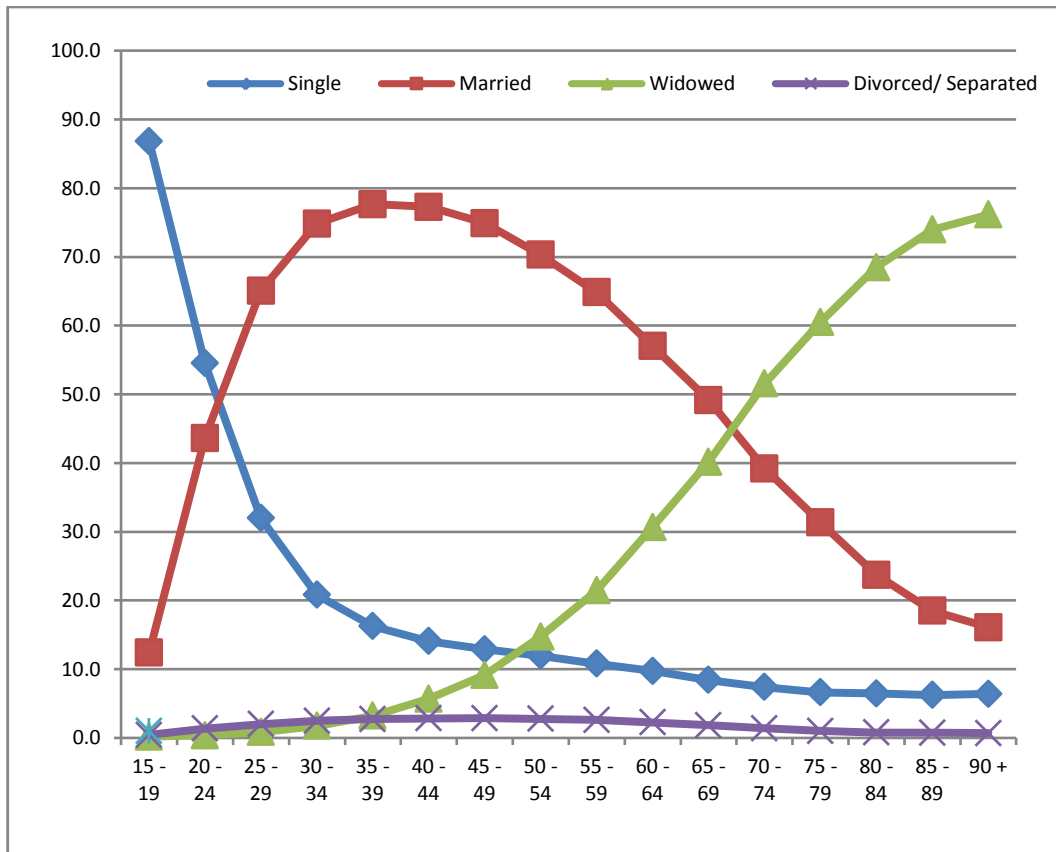

Among the population 15 years and over, a higher proportion of males (61%) than females (58%) are married, while the proportion of those who reported single is also slightly higher for males (32%) than females (30%). However, many more females (10%) than males (3%) are widowed. This may be linked to the longer life expectancy of women compared to men, and to the higher rates of remarriage among men. Figure 8 shows that the highest proportion (85%) of married men are in the age group 40-59, while the proportion of married women peaks at 77.7 percent in the 35-39 age-group. It also indicates that among the younger population (especially between 15 to 24 years), the proportion of unmarried people is large. After age 40, the proportion of married females starts to decline, while for males the decline is more prominent after 60 years. This trend is also supported by the fact that the proportion of the widowed population grows substantially among women aged 50 years and over, while for males it is aged 70 years and over (Figure 8).

Figure 8: Proportion of the Population Aged 15 and over by Sex, Age and Marital Status

Male

Female

## 2.12. Literacy

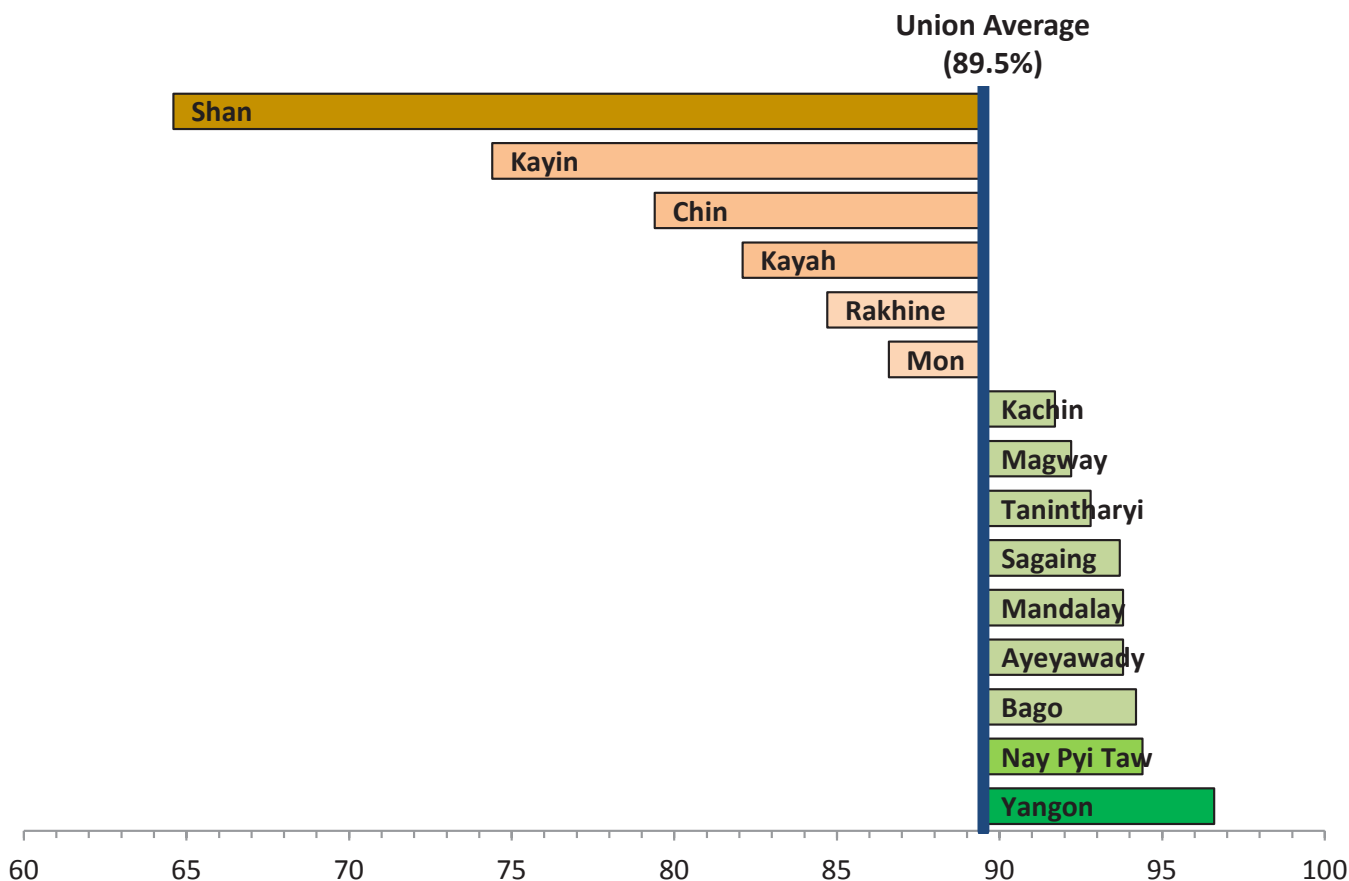

The population aged 5 years and over were asked questions related to literacy, school attendance and the highest level of education they had completed. Out of 33.9 million people aged 15 years and over, 30.37 million reported to be literate, representing a literacy rate of 89.5 percent. There are over 3.55 million people who are illiterate. Table 8 shows the population who are literate and illiterate, including the literacy rates by State/Region and sex.

**Table 8: Population 15 years and over by Literacy Status, Sex and by State/Region**

	Both sexes			Percent Literate		
	Total	Literate	Illiterate	Both Sexes	Male	Female
<b>UNION</b>	<b>33,934,631</b>	<b>30,378,819</b>	<b>3,555,812</b>	<b>89.5</b>	<b>92.6</b>	<b>86.9</b>
Urban	10,399,334	9,902,101	497,233	95.2	97.1	93.7
Rural	23,535,297	20,476,718	3,058,579	87.0	90.7	83.8
Kachin	919,246	842,602	76,644	91.7	94.1	89.4
Kayah	175,570	144,085	31,485	82.1	87.0	77.6
Kayin	924,446	687,871	236,575	74.4	78.4	70.9
Chin	279,247	221,858	57,389	79.4	88.5	71.9
Sagaing	3,598,969	3,372,855	226,114	93.7	96.6	91.4
Tanintharyi	881,630	817,822	63,808	92.8	94.5	91.2
Bago	3,379,439	3,184,988	194,451	94.2	96.7	92.2
Magway	2,753,529	2,540,124	213,405	92.2	96.5	88.9
Mandalay	4,299,250	4,030,908	268,342	93.8	97.3	90.9
Mon	1,328,202	1,149,918	178,284	86.6	89.5	84.2
Rakhine	1,391,311	1,178,295	213,016	84.7	92.2	78.7
Yangon	5,271,946	5,095,313	176,633	96.6	98.0	95.5
Shan	3,715,553	2,400,983	1,314,570	64.6	70.3	59.4
Ayeyawady	4,257,899	3,995,130	262,769	93.8	95.9	92.0
Nay Pyi Taw	758,394	716,067	42,327	94.4	98.0	91.4

Figure 9 shows the deviation of literacy levels from the national average. Literacy levels are lowest in the States of Shan, Kayin and Chin at 65, 74 and 79 percent, respectively. The areas with the highest literacy rates are Yangon, Nay Pyi Taw and Bago Regions, all reporting levels of more than 94 percent.

**Figure 9: Deviation of Literacy Rates from the Union Average by State/Region**

### 2.13. School Attendance

The official entry age for primary education in Myanmar is 5 years. Out of a population of 43,517,147 persons aged 5 years and over living in conventional households, 8,461,477 are currently attending school. Of those currently attending school, 3.4 million are aged 5-9 years, 2.9 million are aged 10-13 years, 935,352 are 14-15 years old, while 938,459 are aged 16-20 years. Only 246,221 are aged 21 years and over. Comparing male and female school attendance, the proportion of males and females are similar up to the age of 15. After the age of 15, more males are at school than females.

**Table 9: School Attendance for persons aged 5 years and over living in Conventional Households**

	Total (5 years and above)	Age Groups in years				
		5 - 9	10 - 13	14 -15	16 - 20	21 and above
<b>UNION</b>	<b>43,517,147</b>	<b>4,724,561</b>	<b>3,907,608</b>	<b>1,850,492</b>	<b>4,313,615</b>	<b>28,720,871</b>
Never Attended	5,605,333	20.3%	4.5%	5.3%	6.7%	14.2%
Previously Attended	29,450,337	8.5%	19.3%	44.2%	71.5%	84.9%
Currently attending	8,461,477	71.2%	76.2%	50.5%	21.8%	0.9%

## 2.14. Disability

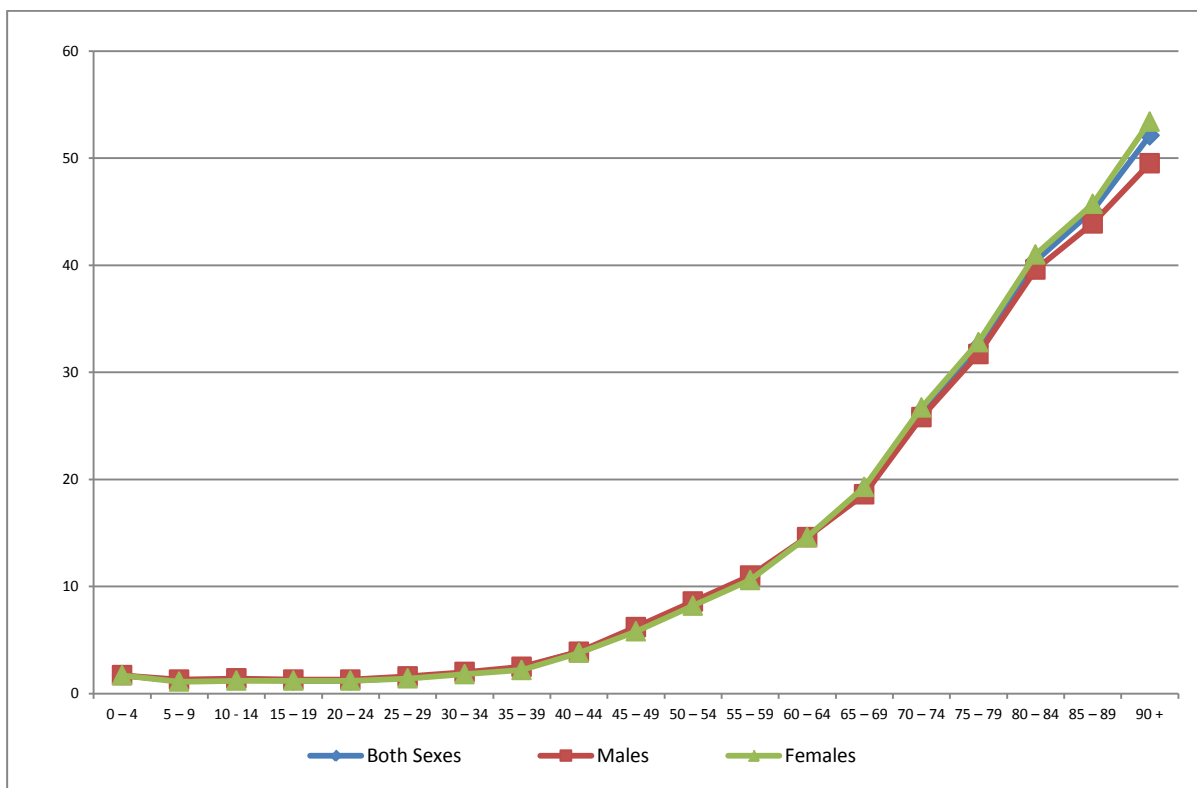

The information on disability in the 2014 Census included four categories (seeing, hearing, walking and remembering/mental) and the degree of difficulty a respondent experienced for each type. A total of 2,311,250 people (4.6%) have at least one type of disability. This is presented in Table 10. The most common type of disability is seeing (2.5%), followed by walking (1.9%), remembering/mental (1.7%) and lastly hearing (1.3%). The disability prevalence is higher among females (4.8%) than males (4.4%). By State and Region, the highest prevalence is reported in Ayeyawady (7.6%), Chin (7.4%) and Tanintharyi (7%), while the lowest is observed in Nay Pyi Taw, the administrative capital city.

**Table 10: Number of people with Disability and Disability Prevalence Rate by State/Region**

	People who are Disabled	Percent of population who have disability in ....				
		Any type	Seeing	Hearing	Walking	Remembering/Mental
<b>UNION</b>	<b>2,311,250</b>	<b>4.6</b>	<b>2.5</b>	<b>1.3</b>	<b>1.9</b>	<b>1.7</b>

Ayeyawady	472,619	7.6	4.6	2.0	3.2	2.8
Nay Pyi Taw	36,583	3.2	1.6	0.8	1.3	1.0

It is evident that disability is closely related to age as shown in Figure 10. The prevalence of disability is 10 percent between the ages of 55 and 59 and starts to increase rapidly, reaching over 50 percent at age 90.

**Figure 10: Proportion of the Population with Disability (prevalence rates) by Age and Sex**

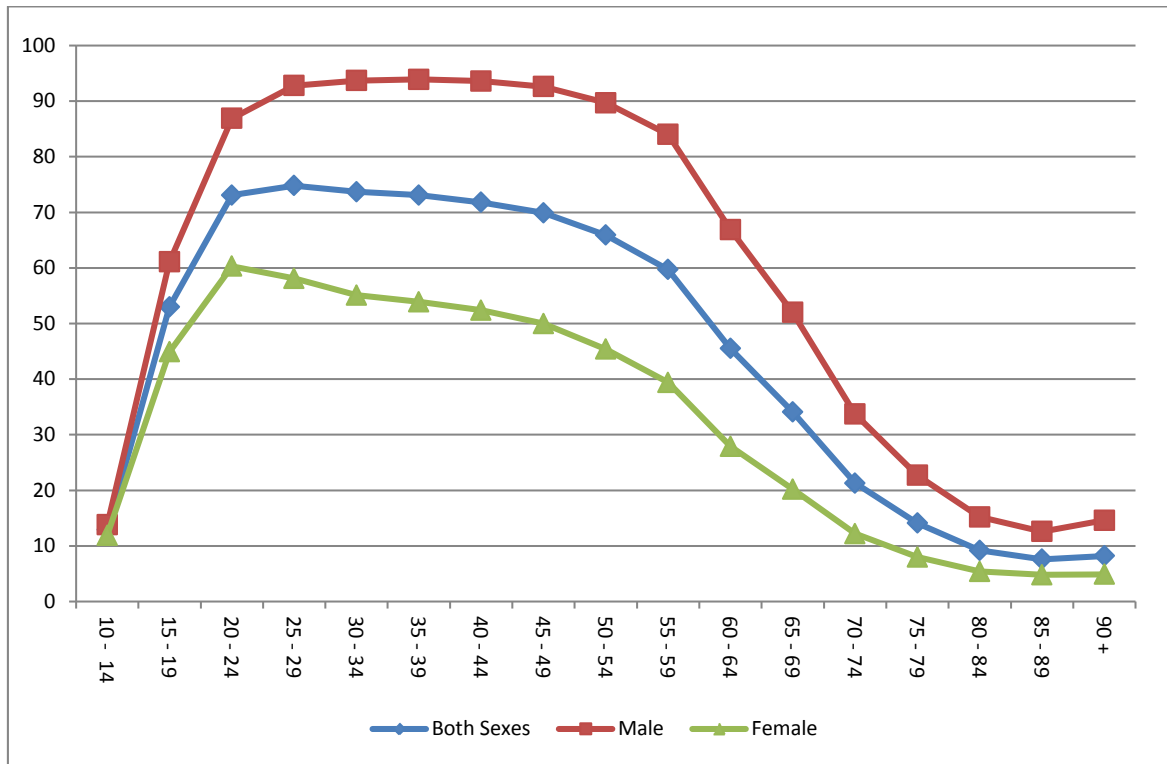

### 2.15. Labour Force Participation Rate

The questions on usual economic activity were asked to respondents aged 10 years and above. The period of reference included the preceding 12 months before the census enumeration. Accordingly, information on this topic was collected for all 40,988,693 people aged 10 and above. The proportion of the population in the labour force among the population aged 10 and above (labour force participation rate) is 57.0 percent. The labour force participation rate is 63.4 percent when the lowest age applied is 15 years. The labour force participation rate for the age group 15-64 is 67.0 percent. This is important for international comparisons.

The labour force participation rate by age-group among men is almost linear from age 25 to 50 years, while the rate among women peaks at age 20-24 before it steadily declines to age 50. An analysis of the labour force participation rate by sex and age show that the rates fall rapidly after the age of 60 years for both men and women (Figure 11).

**Figure 11: Labour Force Participation Rate by Age Group**

The census results further show that unemployment rates among the labour force of 15-64 years is 4.0 percent at the Union level. These are people who are actively searching for jobs and are ready to take up a job when it becomes available. The employment-to-population ratio, which is defined as the ratio of the total labour force currently employed to the total working age population is 64.4 percent. This ratio means that of all the people who are of working age (15-64) in the country, 64.4 percent are gainfully employed. The remaining 35.6 percent are either unemployed or are not part of the labour force. There is a huge regional variation as shown in Table 11. The high unemployment rates in Rakhine State and Kayin State are striking. Unemployment rates on the other hand are particularly low in Shan State, Kayah State and in Nay Pyi Taw Union Territory.

**Table 11: Labour Force Participation Rate, Unemployment Rate and Employment-to-Population Ratio by State/Region**

	Labour Force Participation Rate (15-64)			Unemployment Rate (15-64)			Employment to Population Ratio (15-64)

## 2.16. Household Size

There were 10,877,832 conventional households in Myanmar at the time of the census. Yangon Region registered the largest number of households, while the smallest numbers were recorded in Kayah and Chin States. The number of persons enumerated in conventional households was 47,929,999, representing 95.3 percent of the population. The remaining 2,349,901 persons were living in institutional households.

The mean household size is 4.4 people at the national level. Mean household size is the ratio of the total population in households to the number of conventional households in an area. Figure 12 shows the mean size of conventional households by State and Region. The mean household size is highest in Kachin and Chin States, both with 5.1 persons per household. The lowest household size is recorded in Nay Pyi Taw, Magway and Ayeyawady Regions, all with 4.1 persons.

**Figure 12: Mean Household Size by State/Region**

### 2.17. Housing Conditions

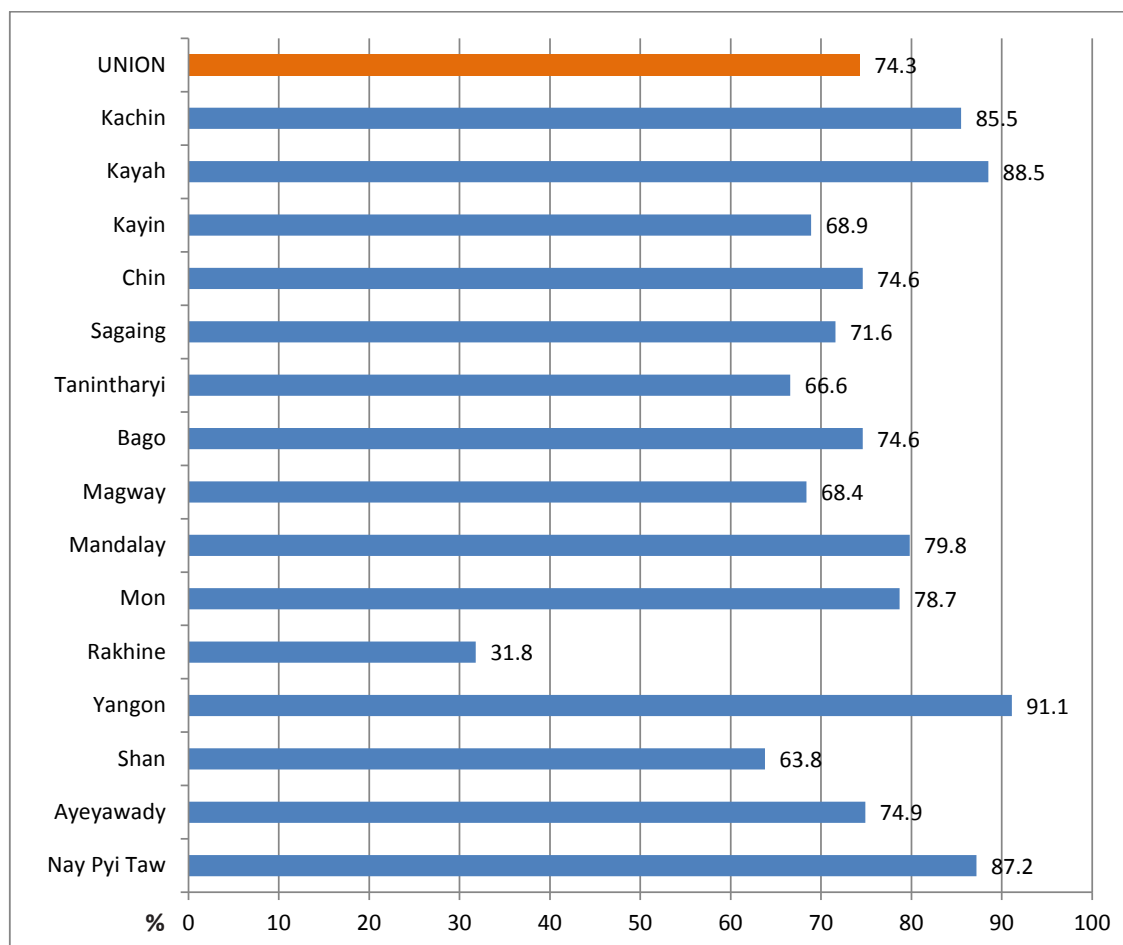

The conditions of housing units are important characteristics which indicate the quality of life of the population. The information presented in Table 12 includes ownership of the housing unit, type of toilet facility and main materials of walls and roofs.

About four out of five households in Myanmar are owners of their housing unit. In urban areas, 66 percent of households own the housing units where they reside, 20 percent are tenants while 7 percent live in housing provided by the Government. The main toilet facility at the Union level is improved pit latrine (water seal), 72.2 percent of households reported using this facility. More households in urban areas (87.1%) than in rural areas (66.4%) used improved pit latrine (water seal). It is important to note that 14.4 percent of households do not have a toilet facility. This scenario is much more prominent in rural (19%) than in urban areas (2.6%).

The census information further shows that 74.3 percent of households had toilet facilities that were either a flush toilet or a water seal (improved pit latrine). These two are classified as improved toilet facilities. The remaining households reported having traditional pit latrines, bucket surface latrines, other forms of latrines or no latrines at all.

Yangon Region reported the highest proportion of households with improved sanitation facilities at 91.1 percent, followed by Kayah State at 88.5 percent. Rakhine State recorded by far the lowest proportion of households with improved sanitation facilities at 31.8 percent, followed by Shan State at 63.8 percent (Figure 13).

**Figure 13: Proportion of Households with Improved Sanitation Facilities by State/Region**

The census data shows that a significant proportion of household's walls are made of bamboo. At the Union level, housing units with bamboo walls account for 51.2 percent of total households. In rural areas this proportion is much higher (56.3%) than in urban areas (38.1%). The proportion of households with walls made of wood at the Union level ranks second at 21.6 percent of the total.

The census information shows that most households live in housing units where roofs are made of corrugated sheets at the Union level (61.5%), followed by *dhani*, (32.9%). There were more housing units with roofs made of corrugated sheets (81.1%) than *dhani* (11.6%) in urban areas (Table 12).

## 2.18. Housing Amenities

A sizeable proportion of households in Myanmar use electricity (32.4%) as the main source of energy for lighting, followed by candle (20.7%). However, there is a huge difference between urban (77.5%) and rural areas (14.9%) in the use of electricity as the main source of lighting. The proportion of households using battery, generator and solar systems as the main source of lighting is considerable. This is illustrated in Table 13. It is also evident that, four out of five households in Myanmar use wood or charcoal as main sources of energy for cooking. In urban areas, over half of households use wood or charcoal, while in rural areas up to 80 percent use wood or charcoal for cooking. Overall, only 17 percent of households use energy such as electricity and liquefied petroleum gas for cooking. The proportion is higher in urban areas (46%) but very low in rural areas (6%).

**Table 13: Proportion of Households by Main Type of Energy for Lighting and Cooking**

<b>Main Type of Energy for Lighting (%)</b>									
	Total	Electricity	Kerosene	Candle	Battery	Generator (private)	Water mill (private)	Solar system/energy	Other
<b>UNION</b>	<b>10,877,832</b>	<b>32.4</b>	<b>8.1</b>	<b>20.7</b>	<b>16.9</b>	<b>9.3</b>	<b>1.6</b>	<b>8.7</b>	<b>2.2</b>

Rural	7,828,399	5.6	0.2	0.3	86.2	6.1	1.6		

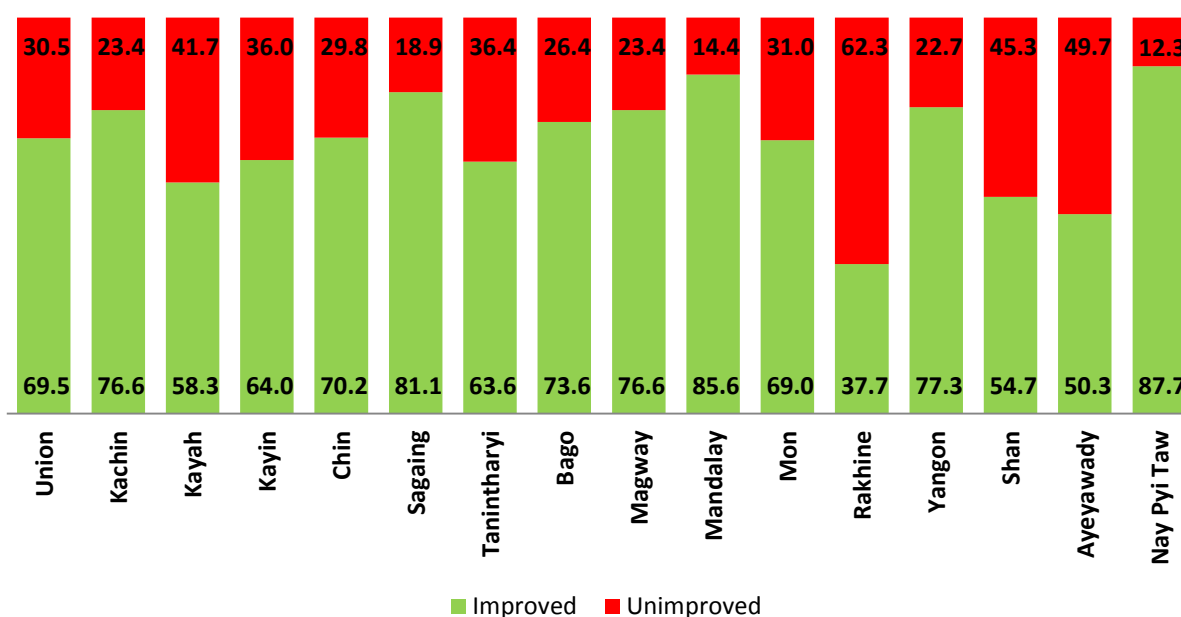

The main sources of drinking water for most households are tap water, tube well/borehole, protected well/spring and bottled water/purifier, all accounting for 69.5% of households at the Union level. There are more households using these sources for drinking water in urban areas (86.7%) than in rural areas (62.8%). These sources of drinking water are classified as improved. This is presented in Table 14. About 28 percent of households in rural areas report pool/pond/lake, river/stream/canal or rainwater as their main source of drinking water.

**Table 14: Proportion of Households by Main Source of Water for Drinking**

	Main Source of Drinking Water (%)										
	Total	Tap water/Piped	Tube well, borehole	Protected well/Spring	Water purifier/bottled water	Unprotected well/Spring	Pool/Pond/Lake	River/stream/canal	Waterfall/Rain water	Tanker/Truck	Other
<b>UNION</b>	<b>10,877,832</b>	<b>9.0</b>	<b>31.4</b>	<b>18.9</b>	<b>10.2</b>	<b>5.3</b>	<b>12.3</b>	<b>7.5</b>	<b>3.1</b>	<b>0.5</b>	<b>1.8</b>

Rural	7,828,399	6.2	32.8	21.8	2.0	6.7	14.7	9.7	4.0	0.2	1.9

At the State/Region level, Rakhine State reported by far the lowest proportion of households using improved sources of drinking water (38%), while Nay Pyi Taw, Mandalay and Sagaing reported the highest proportions at 88 percent, 86 percent and 81 percent, respectively. This is shown in Figure 14.

**Figure 14: Proportion of Households with Access to Improved Sources of Drinking Water, by State/Region<sup>11</sup>**

<sup>11</sup> Definition of "Improved Water Source" has been adapted from the official site of MDG Indicators (<http://mdgs.un.org/unsd/mdg/Metadata.aspx?IndicatorId=30>).

## 2.19. Ownership of Household Assets

Information was also collected on the ownership of certain assets at the household level. The items included radio, television set, mobile phone, landline telephone, computer, internet at home, bicycles, motorcycles, cars/trucks/vans, etc. Table 15 presents information on the ownership of household assets at the Union level and by urban and rural areas.

**Table 15: Proportion of households by Ownership of Selected Communication and Transportation Items**

Ownership of Communication items (%)									
	Total	Radio	Television	Landline phone	Mobile phone	Computer	Internet at home	% with none of the items	% with all of the items

Rural	7,828,399	1.2	37.7	31.7	2.9	5.1	2.8	29.1	

## 2.20. Fertility

### 2.20.1. Crude Birth Rate

The crude birth rate (CBR) is defined as the number of births that occur in a particular year per 1,000 people. There were 906,493 children born to all women in the 12 months prior to the census date. This gives a CBR of 18.9 births per 1,000 populations. The CBR is higher in rural areas (20.1) than in urban areas (15.8). A comparison by State and Region level indicates that the CBR is highest in Chin (29.9), Kayah (26.1) and Kayin (23.8) and lowest in Yangon (15.5) and Mandalay (16.9).

### 2.20.2. Total Fertility Rate

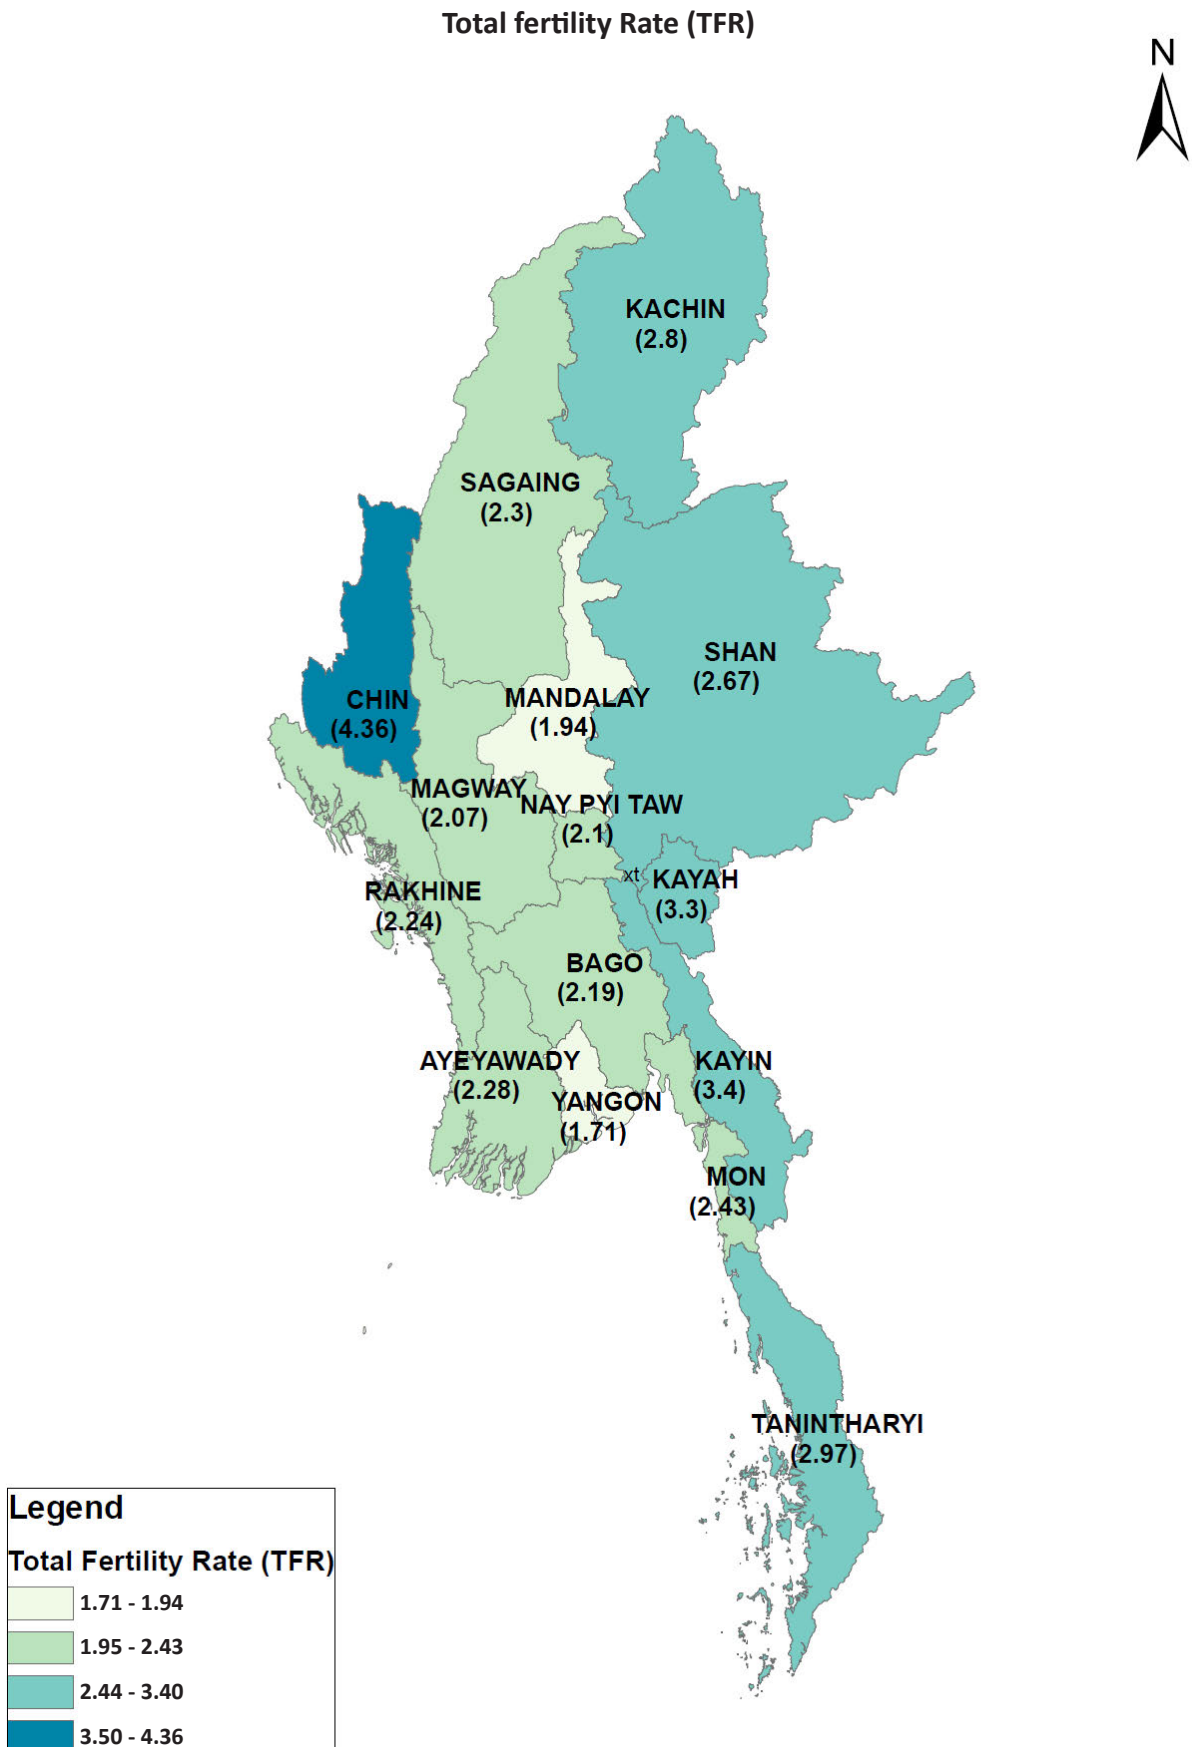

The Total Fertility Rate (TFR) is defined as the number of births a woman would have if she experiences the current observed age-specific fertility rates, and if she survives to the end of her childbearing age, which ranges from 15-49 years. Based on the information from the 2014 Census, the unadjusted fertility rate of Myanmar is 2.29 children per woman, while the marital fertility rate is much higher at 4.03. The increased age at first marriage and the relatively high proportion of young, unmarried women in Myanmar may be responsible for the low average number of children per woman in the population of reproductive age. The total fertility rate differs significantly by place of residence; it is lower in urban areas (1.8 and 3.6) and higher in rural areas (2.5 and 4.2). Fertility rates vary significantly by States and Regions; they are highest in Chin (4.4), Kayin (3.4) and Kayah (3.3) and lowest in Yangon (1.7) and Mandalay (1.9). This is shown in Table 16 and Figure 15.

**Table 16: The levels of CBR, TFR and Total Marital Fertility Rates (TMFR) by State/Region**

	<b>CBR</b>	<b>TFR</b>	<b>TMFR</b>
<b>UNION</b>	<b>18.8</b>	<b>2.3</b>	<b>4.0</b>
Urban	15.8	1.8	3.6
Rural	20.1	2.5	4.2
Kachin	22.0	2.8	5.1
Kayah	26.1	3.3	5.7
Kayin	23.8	3.4	5.4
Chin	29.9	4.4	6.9
Sagaing	19.4	2.3	4.4
Tanintharyi	21.9	3.0	5.0
Bago	17.6	2.2	3.6
Magway	17.6	2.1	3.8
Mandalay	16.9	1.9	3.7
Mon	18.1	2.4	4.2
Rakhine	18.0	2.2	3.5
Yangon	15.5	1.7	3.3
Shan	21.2	2.7	4.3
Ayeyawady	20.2	2.6	4.1
Nay Pyi Taw	18.7	2.1	3.4

Figure 15: Levels of Total Fertility Rate by State/Region

The estimates of Age Specific Fertility Rates (ASFR's) show that fertility rates have an inverted U-shaped form that peaks between the ages of 25 – 29. It further shows that urban women have lower fertility rates than rural women. This lower fertility is observed in all age groups (Figure 16).

**Figure 16: Age Specific Fertility Rate by Urban and Rural place of residence**

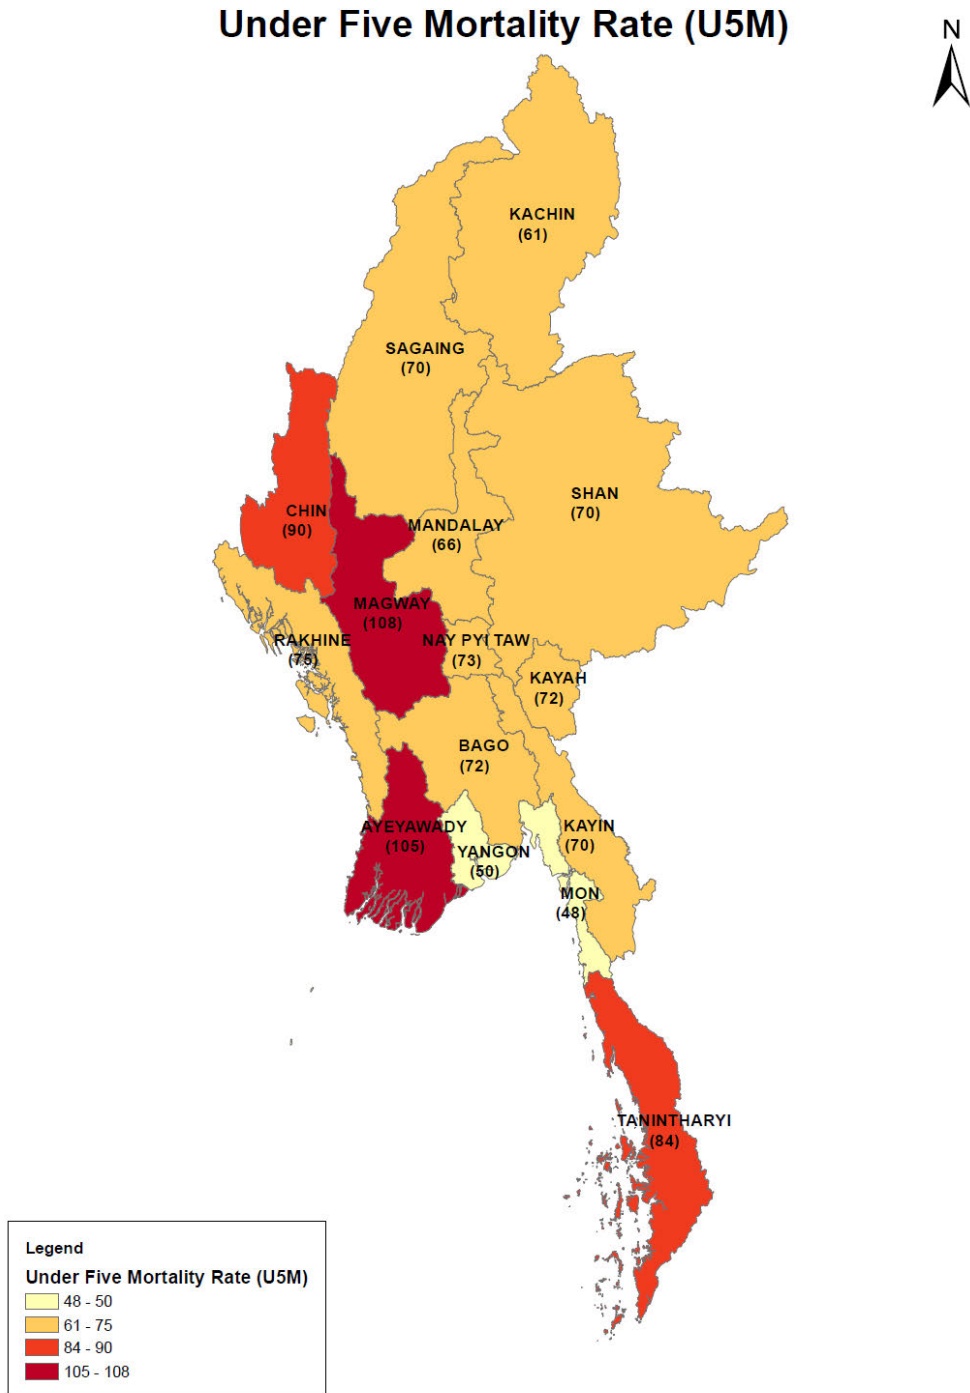

## 2.21. Childhood Mortality and Life Expectancy

The census collected information on births and deaths from ever married women. This information has been analysed and shows the mortality indicators at Union level and by State/Region. The census shows that for every 1,000 children born in Myanmar, 62 die before reaching their first birthday. This rate is higher in rural areas (68) than in urban areas (41). By State and Region, Magway and Ayeyawady have the highest rates with 89 and 87 deaths per 1,000 live births, respectively. The under-five mortality rate is 72 at the Union level with the same pattern at both the State and Region level. The expectation of life at birth is 66.8 for both sexes. People born or who live in Yangon Region and Mon State are expected to live the longest at 71.2 and 71.7 years respectively. Mortality rates at the Union level, urban/rural place of residence and by State and Region are presented in Table 17 and displayed in Figure 17.

**Table 17: Childhood Mortality Indicators (IMR, U5MR and Life Expectancy at birth) by State/Region**

	Infant Mortality Rate (IMR)	Child Mortality Rate (CMR)	Under Five Mortality Rate (U5MR)	Life Expectancy at Birth
<b>UNION</b>	<b>62</b>	<b>11</b>	<b>72</b>	<b>66.8</b>

Nay Pyi Taw	63	11	73	66.6

Figure 17: Under Five Mortality Rate by State/Region

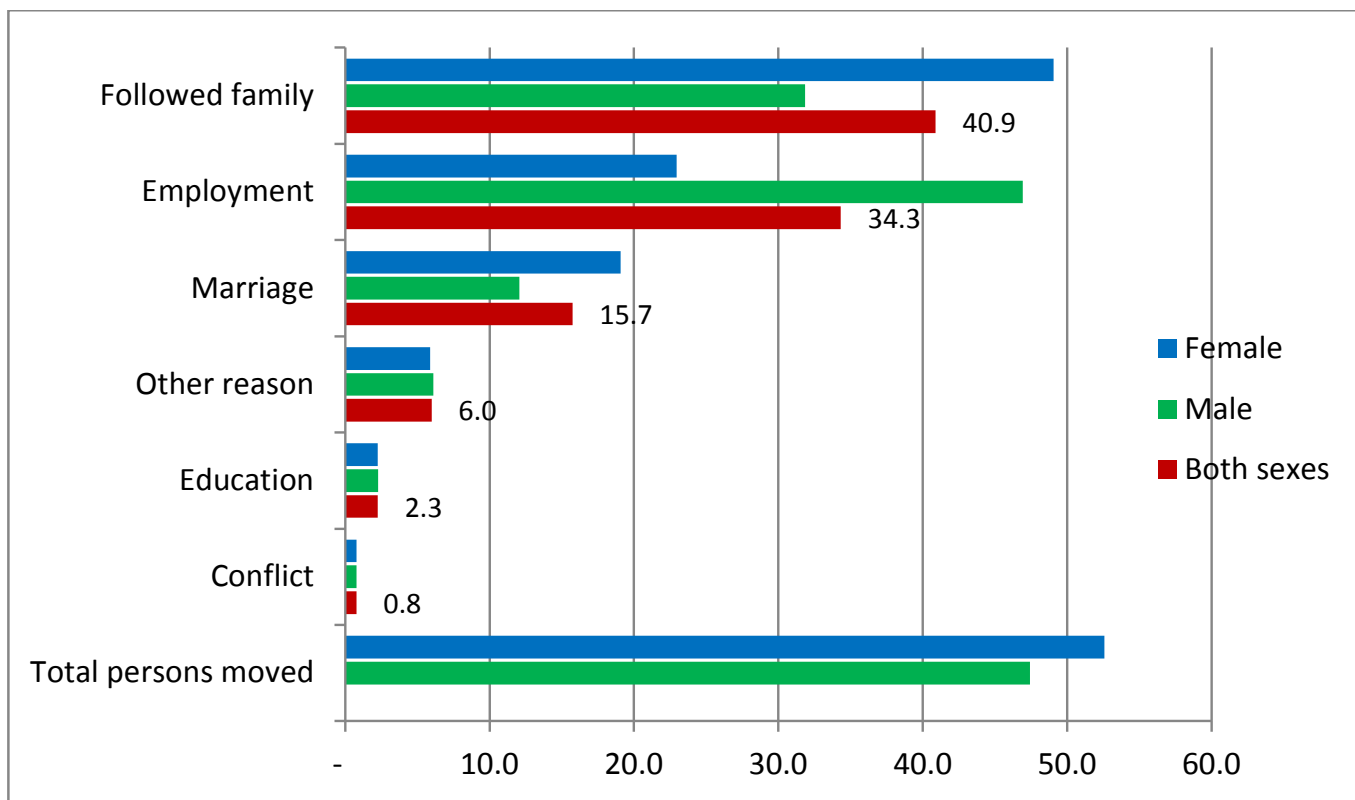

## 2.22. Migration

### 2.22.1. Main Reasons for Migration

The Census shows that 53 percent of all persons who moved from their previous place of usual residence within Myanmar were female. The main reason for movement for both sexes was “following family” and “employment/seeking employment.” As shown in Figure 18, females were more likely to follow family (49%) than males (32%); and males migrated more for reasons of employment (47%) than females (23%).

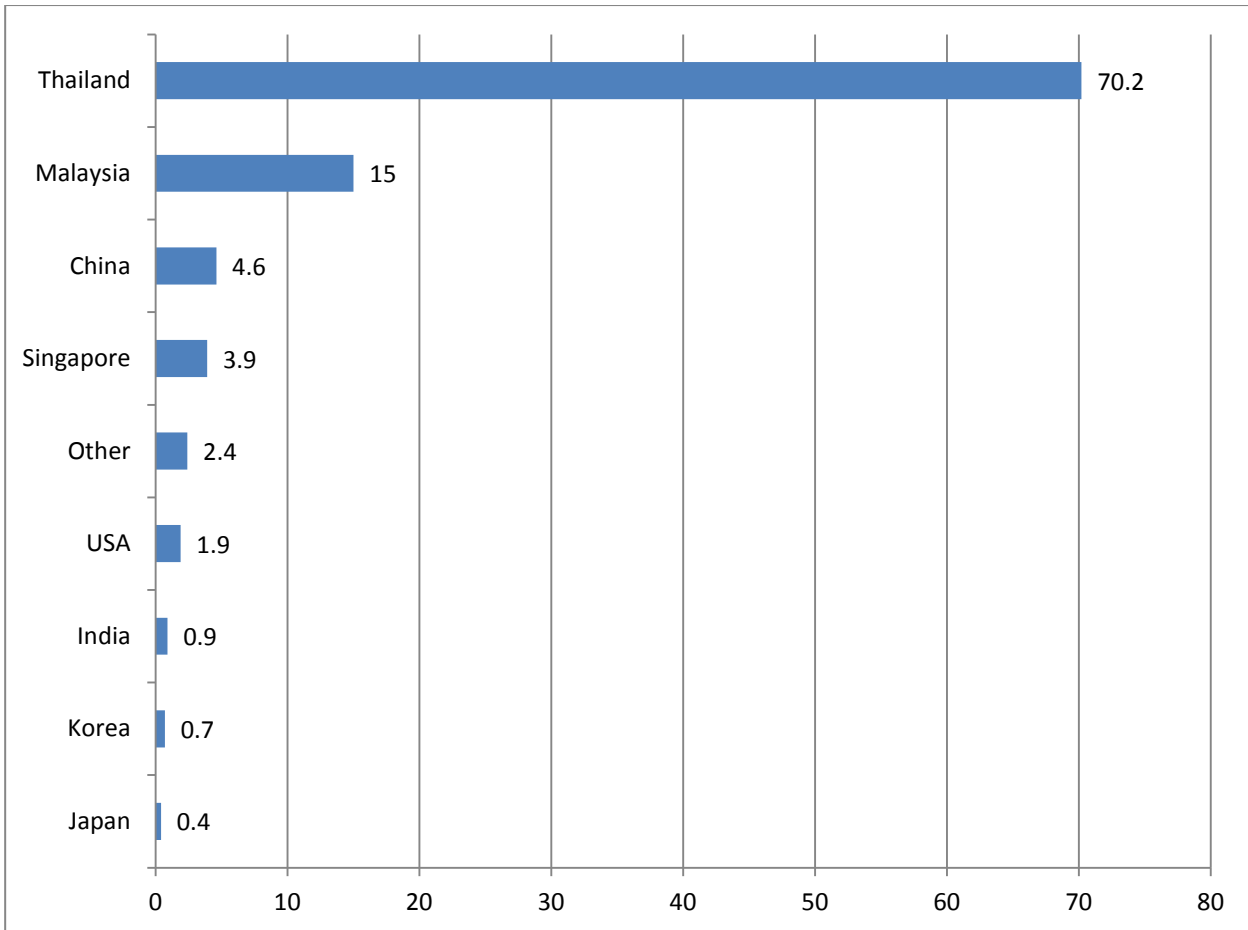

Figure 18: Proportion of Migrants by Reason for Movement by Sex

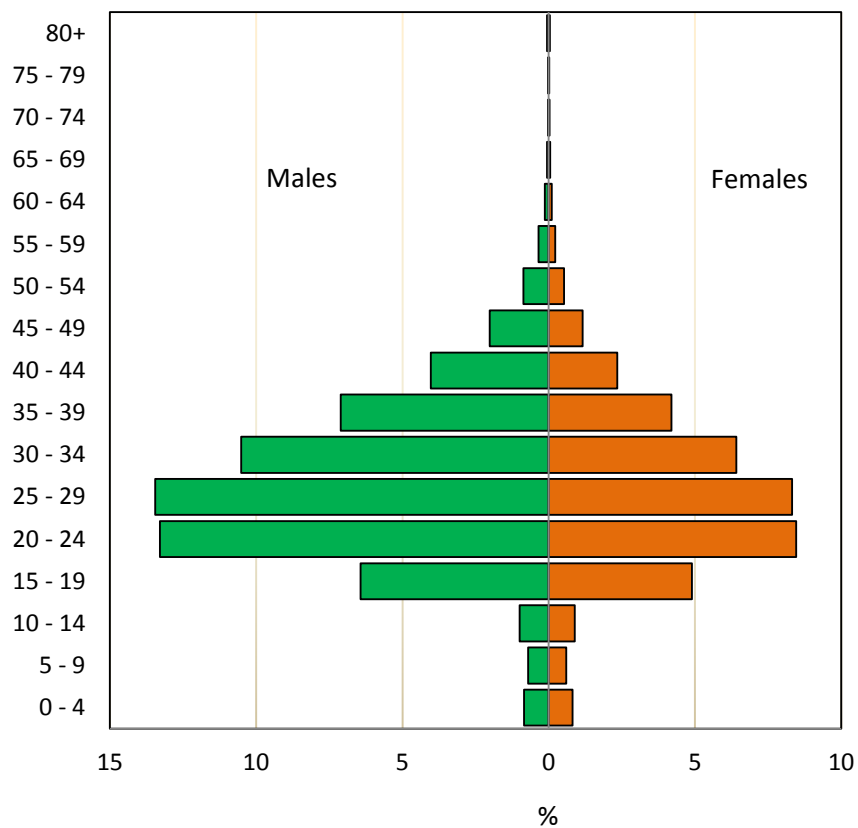

### 2.22.2. Household Members Living outside Myanmar

Information collected from households during the census shows that there are approximately 2 million former household members living outside of Myanmar. Of these, about 1.2 million are male, representing 61 percent of the total population reported to be living out of the country. About 70 percent of those living outside Myanmar were reported to be living in Thailand, while 15 percent were in Malaysia. The census further shows that out of the approximately 2 million people reported to be living abroad, about 1.7 million are between the ages of 15 and 39 (83 percent) and up to 1.1 million in this age bracket are male (Figure 19 and Figure 20).

## **Annex 1: Questionnaire**

THE REPUBLIC OF THE UNION OF MYANMAR  
 MINISTRY OF IMMIGRATION AND POPULATION  
 2014 POPULATION AND HOUSING CENSUS  
 Main Questionnaire

Questionnaire number   of   for this household

HOUSEHOLD IDENTIFICATION

State/Region	District	Township/Sub-Township	Ward/Village Tract	Urban or Rural	Enumeration Area (Block No.)	Household No.
<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="checkbox"/> Urban <input type="checkbox"/> Rural	<input type="text"/>	<input type="text"/>

INSTRUCTIONS FOR COMPLETION

USE 2B BLACK PENCIL ONLY. Write then shade like this:  23

or this:  1  2  3  4  5  6  7  8  9  0

Write numbers like this:  1  2  3  4  5  6  7  8  9  0

FOR ALL MEMBERS OF THE HOUSEHOLD

1. Serial number of household member	2. Name (Write all persons who spent the night of 29 March 2014 in this household. Make sure to include babies, elderly persons, disabled persons and visitors)  ONLY PERSONS WHO SPENT THE CENSUS NIGHT IN THIS HOUSEHOLD	3. Relationship to the head of the household Head of Household Spouse Son/Daughter-in-law Grandchild/Great grandchild Parent/Parent-in-Law Sibling Grandparent Other Relative Adopted Child Non Relative	4. Sex Male Female	5. Completed Age <i>If age greater than or equal to 98, write "98". If less than one write "00".</i>  In Years	6. Marital status Single (Never married) Married Widowed Divorced/Separated Renounced	7. Religion Buddhist Christian Islam Hindu Animist Other Religion No Religion	8. Ethnicity	9. Does (Name) have any difficulty...? Codes i. Seeing, even if wearing glasses ii. Hearing, even if using hearing aid iii. Walking, climbing steps, carrying items iv. Remembering or concentrating No - no difficulty = 1 Yes - some difficulty = 2 Yes a lot of difficulty = 3 Cannot do at all = 4			
								Seeing	Hearing	Walking	Remembering

## Annex 2: Definitions and Concepts

This section contains definitions of census terms and provides explanations which may be required to understand the census results. Most definitions contained here are based on the questions in the census questionnaires and the methodology applied in the various phases of the census process. The main concepts are detailed below.

**Population:** The population in this report corresponds to the de-facto population of Myanmar on Census Night (see below).

**Census Enumeration:** The process of visiting every household and interviewing the head of household or the most responsible member of a household in order to determine the number and characteristics of all persons and households in the country at a given time. The collection of this information is carried out through the completion of questionnaires for every conventional household and every institution.

**Census Enumeration Area (EA):** A Census Enumeration Area (EA) is a geographic unit down to the ward level in urban areas and the village tract level in rural areas, into which the whole country was divided for census purposes. For each EA an enumerator was deployed to undertake the enumeration within the census period. An EA contained on average 120 households.

**Census Night:** The night between the 29<sup>th</sup> and the 30<sup>th</sup> March 2014. Every person in Myanmar was enumerated where they spent the Census Night.

**De-Facto Census:** The *de-facto* census method enumerates persons at the place where they spend the Census Night. The census enumeration could also be carried out using a *De jure* approach where people are enumerated in their usual or legal place of residence. Although each approach has its own advantages and disadvantages, the *de facto* approach is easier to implement, it is closer to the reality of daily life and mitigates the possibility of omission and duplication. The 2014 MPHC was conducted based on the *de facto* approach.

**Canvasser enumeration methods:** There are two main methods of census enumeration, the canvasser and the householder approach. In the canvasser method, information for each individual or household is collected and recorded on the questionnaire by a pre-trained census enumerator. The householder method entails self-enumeration by each individual or household. Although the questionnaires are usually distributed, collected and checked by a census official, they can also be sent directly via mail or internet. The United Nations recommends that the canvasser method is more suitable for developing country populations or population groups who may find it difficult or who are unwilling to complete the census forms themselves. The canvasser method was used in the 2014 MPHC.

**Structure:** A structure is a building used for the purposes of residential, business, religious or any other activity. Only structures used for residential purposes were included in the 2014 MPHC. A structure can contain one or several housing units.

**Housing Unit/Dwelling Unit:** A housing unit is a place of abode or a residence occupied by one or more households. A housing unit must have a private entrance. As mentioned above, there can be one or several housing units within a structure.

**Conventional Household:** A conventional household includes one or more persons who are either related or unrelated and share living quarters (single quarter or compound) and meals. The household members would be eating food prepared from the same cooking pot. In most cases, there would be one person acknowledged by the household members as the head of the household.

**Institutional Household:** An institutional household is a unit where a group of people are living together but it is not a conventional household. Examples include: old-people's homes, orphanages, hospitals, boarding schools, hotels, hostels and guest houses, institutions for persons with disabilities, prisons, monasteries, convents, military and police barracks, and camps for workers.

**Head of household:** The head of a conventional household is the household member who makes key decisions and is recognised as head of the household by others. The head of household may be male or female. The person is not necessarily mainly responsible for earning the livelihood for the household. In the 2014 MPHIC, if the head of household was not present on Census Night, the next most responsible member was reported as the *de facto* head.

**Relationship to the Head of Household:** Household members are defined by their relationship to the head of household (e.g. spouse, child, sister, brother).

**Population Density:** The population density relates to the number of persons in a given administrative area to the surface of the area, expressed in square kilometres (Km<sup>2</sup>). Areas covered by water are excluded from the calculation.

**Rural area:** Areas classified by the Department of General Administration (GAD) as village tracts. Generally these are areas with low population density and a land use which is predominantly agricultural.

**Urban area:** Areas classified by the GAD as wards. Generally these areas have an increased density of building structures, population and better infrastructural development.

**Age:** Number of years a person has lived at their last birthday in reference to the Census Night. When the age was not known, interviewers were trained to use other ways of establishing the age of the respondent, including calendars of events, conversion tables, etc. The interpretation of age information is given below:

- a. The 0 (less than 1) year olds are those whose age is less than one year.
- b. The 1 year olds are those aged 1 year or more but less than 2 years.
- c. The 0-4 year age group are those aged less than 5 years.
- d. The 5-9 year age group are those aged 5 years and more but less than 10 years.
- e. The group 90+ included those aged 90 years or older.

**Marital Status:** Status of the enumerated person in relation to the institution of marriage. The marital status was described by five categories: Single/never married, married, widowed, divorced/separated and renounced.

**Disability:** Disability is a situation where a person is at a greater risk than the general population of experiencing restrictions in performing routine activities (including activities of daily living) or participating in roles (such as work) if no supportive measures are offered. The difficulties covered in the 2014 census included:

- a. **Walking difficulty** (wheel chairs, crutches, limping, problems climbing steps);
- b. **Seeing difficulty** (low vision, blind);
- c. **Hearing difficulty** (partially or completely deaf);
- d. **Mental/Intellectual difficulty** (slow learning development making it hard to compete with their counterparts at school, other mental conditions).

**Identity card:** An identity card is a document used to verify aspects of a person's personal identity. There are several types of identity cards issued by the Government of Myanmar, and national passports in the case of foreigners.

**Place of birth:** This is the administrative township which was the usual place of residence of the mother at the time of the person's birth. In the case of a person born outside Myanmar, the place of birth is the country where the person was born.

**Place of usual residence:** This is the administrative township where a person has lived for more than 6 months in the last 12 months or where she/he intends to live for more than 6 of the next 12 months.

**Place of previous residence:** This is the administrative township where a person usually lived before moving to the current place of usual residence. In cases where a person has not moved, the place of current usual residence and previous usual residence are the same.

**Duration of residence:** The number of completed years a person has lived in the township where he/she has his/her place of usual residence. This is the number of years a person has been continuously in this place without migrating to other places for long periods.

## Education

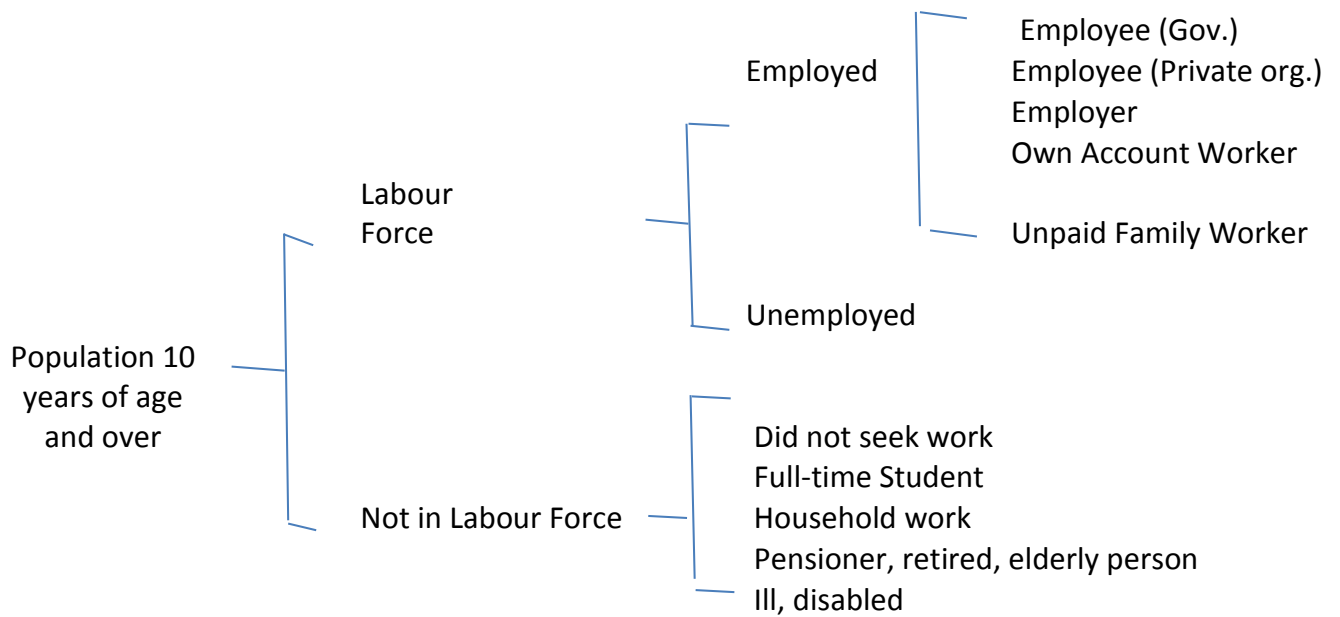

Education is the process by which people learn through instruction and teaching. The 2014 MPHC placed an emphasis on literacy skills, school attendance and educational attainment. The other categorisations used under education were:

**Literacy:** The ability to read and write in any language with reasonable understanding.

**School attendance:** The attendance at any regular educational institution or systematic instruction at any level of education during the last 12 months. This included schooling at pre-primary, primary, middle, high school and tertiary institutions of higher learning. The options were: (a) Currently attending; (b) Attended previously; (c) Never attended.

**Educational Attainment:** The highest grade/standard/diploma/degree completed within the most advanced level attended in the education system of the country where the education was received. It covered both public and private institutions accredited by government.

**Labour Force Status:** According to the type of usual economic activities during the 12 months before Census Night, all persons 10 years of age and over were classified as follows:

**Labour Force:** The Labour force is a general term covering “employed” and “unemployed” persons in the population.

**Employed:** “Employed” persons refer to those who did any work during the time of the week before the census date or worked for more than 6 months in the 12 months before the census date for pay or profit, such as a wage, salary, allowance, business profit, etc. Also included in this category were persons working in family businesses, on a farm, in a store, in a private hospital etc., even though they were not paid any wages.

**Unemployed:** “Unemployed” persons refer to those who had no work but were able to work and actually seeking a job during the reference period, or at the time of the census enumeration.

**Not in labour force:** This category comprised persons who had no work and did not make any positive efforts to find a job during the 6 months before the census date or were unable to work. This included full time students, household work, elderly people, etc.

**Employment Status:** All employed persons were classified according to the economic activity status in the place where they worked during the last 12 months or if they worked in more than one place, where they worked most of the time. There were five employment categories:

**[1] Employee (Government):** those employed and working for government including in state organisation institutions.

**[2] Employee (Private organisation):** those employed and working for private employers or private organisations. All people in private companies, NGOs, international organisations, retail and wholesale enterprises fell under this category.

**[3] Employer:** persons who during the reference period worked in their own business, which also employed one or more other persons.

**[4] Own account worker:** self-employed persons who worked in their own business or worked in their own/family business for family gain **and did not have any employees.**

**[5] Unpaid family worker:** persons who worked in a business, farm, trade or professional enterprise operated by a member of the household/family and received no pay.

**Labour force participation rate:** The labour force participation rate is the ratio between the labour force and the overall size of the total population of the same age range. This is an important indicator as it portrays the proportion of the population that is economically active.

**Unemployment rate:** The percentage of the total labour force that is unemployed but actively seeking employment and willing to work. These are people who are without work, looking for jobs and available for work.

**Employment to population ratio:** A statistical ratio that measures the proportion of the country's working-age population (ages 15 to 64) that is employed. The International Labour Organization (ILO) states that a person is considered employed if they have worked at least 1 hour in "gainful" employment in the most recent week.

**Fertility:** Fertility measures the average number of live births per women, according to their age and marital status. In the 2014 MPHC all ever married women aged 15 years and over were asked for information relating to all their live births.

**Live Birth:** A live birth is one where the infant shows one or more of the following signs of life immediately after birth: crying or similar sounds, movement of the limbs or any other parts of the body and/or any other tangible signs of life. The census was concerned only with children born alive. Also collected was information on the last live birth of ever married female respondents.

**Sex ratio:** The number of males for every 100 females in a population.

**Total fertility rate (TFR):** The average number of children that a woman would give birth to if all women lived to the end of their childbearing years and bore children according to the current schedule of age-specific fertility rates.

**Age specific fertility rate (ASFR):** The age-specific fertility rate measures the annual number of births to women of a specified age or age group per 1,000 women in that age group. Unless otherwise specified, the reference period for the age-specific fertility rates is the calendar year.

**Dependency ratio:** The total dependency ratio is the ratio of dependents (people younger than 15 years and older than 64) to the population of working-age (age 15-64). Data are shown as the proportion of dependents per 100 working-age population. Three different measures can be calculated: total dependency ratio, child dependency ratio and old age dependency ratio.
